

Sprint 2 retrospective

What did we like?

- We have completed all tasks in time limit as a team
 - Even though we have planned twice as many story points as in last sprint.
- I liked that as a team people have finished tasks
- Team was interested in each other 
- Our tasks were created **earlier** in sprint
- I knew what I have to do in the beginning of sprint, I was not confused
- We had online standups
- Improved communication in slack

What we did not like?

- We do not have a machine to use.
- Tasks were created in friday (3 day delay)

Karol

- I did not like the **burndown chart** and time reporting on tasks
- Some tasks were completed in 0 time
- Some user stories were closed before product owner approval (Should have been resolved)

What should we improve?

- We should work more continuously during the sprint
- We should announce our tasks/work completed in slack, mainly the time critical

What shall we implement?

- We should write down methodics/guidelines (sk. 'metodika') for git/tfs/wiki/
- We should define the definition of done , definition of ready
