

Sprint 8 retrospective

What did we like?

- Most of the people finished their work in time
- We were working from start to end
- Scrum master will be changing
- Mato: I was happy, that i had tasks and US for myself.

Karol / Vlado

- progress in neural networks

What we did not like?

- Some processes are still not followed
- Git is not being used at all
- Task are in review columns at th end of the sprints, and stay there too long
- Pull requests are not being merged, nobody is merging them
- repeating issues with unity/git/tasks/lifecycle
- Burndown chart may not be ideal

Karol / Vlado

- Not following the team duties of team members
- Wrong prioritisation of tasks
- Time wasting, and time burning

What should we improve?

- git and unity for everyone
- Reviewer also merges
- We should have a demo
- Maybe have an standalone package for unity application (.exe and others)

Karol / Vlado
