Description

WHAT IS PUBLIC BLOCKCHAIN?

In a public blockchain network everyone has access to the network and can take part in consensus.

WHAT IS PRIVATE BLOCKCHAIN?

In a private blockchain only a single organization will have access and authority over the network. It's basically a partial decentralized system.

THE COMPARISON TABLE

	PUBLIC BLOCKCHAIN	PRIVATE BLOCKCHAIN
Access	Anyone	Single organization
Authority	Decentralized	Partially decentralized
Transaction Speed	Slow	Fast
Consensus	Permissionless	Permissioned
Efficiency	Low	High
Data Handling	Read and Write access for anyone	Read and write for a single organization
Immutability	Full	Partial

CREATED BY 101BLOCKCHAINS.COM

Private vs public

- Access
 - PUBLIC - moze sa pripojit hocikto
 - PRIVATE - moze sa pripojit iba clovek ktory ma na to prava pripadne je vyzvany danou spolocnostou
- Authority
 - PUBLIC - na kazdeho je rovnako rozdelene
 - PRIVATE - je decentralizovane vramci organizacie a ak som spravne pochopil tak aj vramci organizacie sa mozu vybrat nody ktore budu overovat smart contracty (consensus) a ostatne nie. To by malo suvisiest aj s bodom Consensus kde public je permissionless a private je permissioned.
- Immutability
 - PUBLIC - doposial nie je zname alebo nie je dostacny vypoctovy vykon aby bolo mozne nejako menit jednotlivy bloky blockchainu
 - PRIVATE - v pripade private je mozne ze nejaka hlavna autorita dokaze alebo je schopna meni resp. editovat bloky blockchainu alebo ich mazat ked je potreba.

Analyza ze kazdy si precitajte co to blockchain je a ako funguje.
