Obsah

TO DO.....	9
[AMS-186] Implementácia integračného testu Created: 10/Mar/22 Updated: 10/Mar/22	9
[AMS-185] Komunikácia medzi frontendom a web serverom - poslať autentifikačné a registračné údaje Created: 10/Mar/22 Updated: 10/Mar/22.....	10
[AMS-184] Implementovať spôsob pamatania si usera Created: 10/Mar/22 Updated: 10/Mar/22	11
[AMS-183] Menu pre každý zobrazený článok Created: 10/Mar/22 Updated: 10/Mar/22 ..	12
[AMS-182] Dokumentácia web frontendu Created: 10/Mar/22 Updated: 10/Mar/22.....	13
[AMS-180] Github actions na repo team web page Created: 10/Mar/22 Updated: 10/Mar/22	14
[AMS-179] Github repo pre mensie sucasti projektu Created: 06/Mar/22 Updated: 10/Mar/22	15
[AMS-178] Request na MongoDB, ktorý vráti články na základe keywords Created: 03/Mar/22 Updated: 10/Mar/22	16
[AMS-177] Boolean query implementácia Created: 03/Mar/22 Updated: 03/Mar/22	17
[AMS-175] Vyhľadať v scrapnutom článku všetky keywords Created: 03/Mar/22 Updated: 10/Mar/22	18
[AMS-170] Google analytics Created: 24/Feb/22 Updated: 24/Feb/22.....	19
[AMS-168] Obmedzenie API pre tretiu stranu Created: 24/Feb/22 Updated: 24/Feb/22.....	20
[AMS-166] Prevencia zahltenia API Created: 24/Feb/22 Updated: 24/Feb/22.....	21
[AMS-162] PDF report zdieľateľný linkom Created: 24/Feb/22 Updated: 24/Feb/22	22
[AMS-159] Dokumentácia - metodika definition of done Created: 19/Feb/22 Updated: 20/Feb/22.....	23
[AMS-158] Dokumentácia - metodika definition of ready Created: 19/Feb/22 Updated: 20/Feb/22.....	24
[AMS-156] Preklad keywordov do viacerých jazykov Created: 19/Feb/22 Updated: 10/Mar/22	25
↳ [AMS-155] jazyk článku Created: 19/Feb/22 Updated: 19/Feb/22	26
[AMS-154] Článok IIT.SRC Created: 19/Feb/22 Updated: 10/Mar/22.....	27
[AMS-152] User activity Created: 19/Feb/22 Updated: 20/Feb/22	28
[AMS-151] Frontend registrácia Created: 19/Feb/22 Updated: 10/Mar/22.....	29
[AMS-134] Dokumentácia node serveru Created: 14/Feb/22 Updated: 20/Feb/22.....	30
[AMS-112] Fuzzy search Created: 23/Nov/21 Updated: 20/Feb/22.....	31

[AMS-86] PDF report z nájdených článkov Created: 02/Nov/21 Updated: 19/Feb/22.....	32
[AMS-85] Prihlásenie sa na odber nejakého vyhľadaneho človeka Created: 02/Nov/21 Updated: 20/Feb/22.....	33
[AMS-83] Hodnotenie risku pri nájdených článkoch Created: 02/Nov/21 Updated: 02/Nov/21.....	34
[AMS-82] Zvýraznenie hľadaných slovíčok Created: 02/Nov/21 Updated: 02/Nov/21	35
↳[AMS-80] geografická lokácia Created: 02/Nov/21 Updated: 02/Nov/21	36
↳[AMS-79] vyhľadanie na základe zločinov Created: 02/Nov/21 Updated: 03/Mar/22	37
↳[AMS-78] obmedzenie vyhľadávania na základe dátumu vydania článkov Created: 02/Nov/21 Updated: 02/Nov/21	38
[AMS-77] Filter na web stránke Created: 02/Nov/21 Updated: 10/Mar/22	39
↳[AMS-76] Iné možnosti prekladu článkov Created: 02/Nov/21 Updated: 02/Nov/21	40
[AMS-68] Analýza médií, ktoré dostaneme vo výstupoch a aké search queries treba poslať, aby sme mali výsledky ako z Google Created: 02/Nov/21 Updated: 20/Feb/22	41
[AMS-67] Pozrieť sa na zahodené články, kt. neobsahovali paragrafy Created: 02/Nov/21 Updated: 20/Feb/22	42
[AMS-42] Porovnanie výsledkov nášho vyhľadávania s výsledkami Google News Created: 13/Oct/21 Updated: 20/Feb/22	43
[AMS-41] Vyriešiť, čo s článkami, ktoré budú v pôvodnom zdroji nekompletné Created: 13/Oct/21 Updated: 20/Feb/22	44
↳[AMS-38] Zistiť, ako funguje Google Translate API, ako ho vieme použiť Created: 13/Oct/21 Updated: 23/Nov/21	45
[AMS-37] Zistiť, ako fungujú iné zdroje Google News, prípadne aký mechanizmus používa Google News. Created: 13/Oct/21 Updated: 23/Nov/21.....	46
[AMS-33] Zistiť, čo spája kriminálne články Created: 13/Oct/21 Updated: 20/Feb/22.....	47
[AMS-19] Analyza - multilingvistika Created: 05/Oct/21 Updated: 27/Oct/21	48
[AMS-12] Nasu API dat na portal verejnych API v ramci propagacie Created: 05/Oct/21 Updated: 27/Oct/21	49
IN PROGRESS	50
[AMS-181] Integrácia nového stroja do tímového prostredia Created: 10/Mar/22 Updated: 10/Mar/22	50
[AMS-148] Update indexovacieho mechanizmu Created: 19/Feb/22 Updated: 08/Mar/22.....	51
[AMS-144] Autentifikácia usera Created: 19/Feb/22 Updated: 10/Mar/22.....	53
[AMS-143] Komunikácia medzi aplikačným serverom a user databázou Created: 19/Feb/22 Updated: 10/Mar/22	54
[AMS-138] Dokumentácia User guide Created: 14/Feb/22 Updated: 20/Feb/22.....	55
[AMS-137] Dokumentácia elasticsearch Created: 14/Feb/22 Updated: 20/Feb/22.....	56

[AMS-136] Dokumentácia fungovania NGINX Created: 14/Feb/22 Updated: 20/Feb/22 ..	57
[AMS-135] Dokumentácia fungovania dockeru Created: 14/Feb/22 Updated: 20/Feb/22 ..	58
[AMS-36] User databáza + zbieranie aktivity používateľa Created: 13/Oct/21 Updated: 20/Feb/22.....	59
DONE.....	62
↳ [AMS-173] ťahanie dát Created: 24/Feb/22 Updated: 03/Mar/22 Resolved: 03/Mar/22	62
[AMS-172] Implementácia developerského prostredia Created: 24/Feb/22 Updated: 03/Mar/22 Resolved: 03/Mar/22	63
[AMS-171] Implementácia routera na frontende Created: 24/Feb/22 Updated: 11/Mar/22 Resolved: 11/Mar/22	65
[AMS-157] Pridať na stránku tímu priestor na dokumenty z LS Created: 19/Feb/22 Updated: 03/Mar/22 Resolved: 03/Mar/22	68
[AMS-153] Named entity recognition Created: 19/Feb/22 Updated: 11/Mar/22 Resolved: 11/Mar/22	70
[AMS-149] Frontend obrazovka prihlásenia Created: 19/Feb/22 Updated: 11/Mar/22 Resolved: 11/Mar/22	72
[AMS-145] Stránkovanie API Created: 19/Feb/22 Updated: 10/Mar/22 Resolved: 10/Mar/22	74
[AMS-141] Password management Created: 14/Feb/22 Updated: 19/Feb/22 Resolved: 19/Feb/22.....	76
[AMS-140] Zabezpečenie endpointov cez HTTP basic auth Created: 14/Feb/22 Updated: 09/Mar/22 Resolved: 07/Mar/22	77
[AMS-139] Verziovanie docker compose Created: 14/Feb/22 Updated: 24/Feb/22 Resolved: 24/Feb/22	78
[AMS-133] Mapa domény na stránku tímu Created: 14/Feb/22 Updated: 24/Feb/22 Resolved: 24/Feb/22	79
[AMS-132] MongoDB unit test Created: 07/Dec/21 Updated: 14/Dec/21 Resolved: 14/Dec/21	80
[AMS-131] Testovanie dostupnosti kontajnerov Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21.....	81
[AMS-130] Konfigurácia NGINX Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21	82
[AMS-129] [RP] Exporty úloh Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21	83
[AMS-128] [RP] Globálna retrospektíva Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21.....	84
[AMS-127] [RP] Šprint č. 5 Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21	85

[AMS-126] [RP] Metodika docker Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21	86
[AMS-125] [RP] Metodika github actions Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21.....	87
[AMS-124] [ID] Sekv. diagram celkového fungovania Created: 07/Dec/21 Updated: 08/Dec/21 Resolved: 08/Dec/21.....	88
[AMS-123] [ID] Modul aplikačný server + testovanie Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21.....	89
[AMS-122] [ID] Modul frontend + testovanie Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21.....	90
[AMS-121] [ID] Modul na indexovanie + testovanie Created: 07/Dec/21 Updated: 10/Dec/21 Resolved: 10/Dec/21.....	91
[AMS-120] [ID] Modul API server + testovanie Created: 07/Dec/21 Updated: 14/Dec/21 Resolved: 14/Dec/21.....	92
[AMS-119] [ID] Modul scraper + testovanie Created: 07/Dec/21 Updated: 13/Dec/21 Resolved: 13/Dec/21.....	93
[AMS-118] Rozbehnúť PostgreSQL Created: 23/Nov/21 Updated: 28/Nov/21 Resolved: 28/Nov/21.....	94
[AMS-117] Komunikácia medzi aplikačným serverom a API serverom Created: 23/Nov/21 Updated: 07/Dec/21 Resolved: 07/Dec/21.....	95
[AMS-116] Komunikácia medzi API serverom a Elastic Search Created: 23/Nov/21 Updated: 06/Dec/21 Resolved: 06/Dec/21.....	97
[AMS-115] Zobrazenie výsledkov vyhľadávania Created: 23/Nov/21 Updated: 05/Dec/21 Resolved: 05/Dec/21.....	98
[AMS-114] Komunikácia medzi MongoDB a API serverom Created: 23/Nov/21 Updated: 07/Dec/21 Resolved: 07/Dec/21.....	99
[AMS-113] Indexovanie stiahnutých dát Created: 23/Nov/21 Updated: 29/Nov/21 Resolved: 29/Nov/21.....	100
[AMS-111] Dokumentácia k riadeniu projektu Created: 23/Nov/21 Updated: 23/Nov/21 Resolved: 23/Nov/21.....	102
[AMS-110] Dokumentácia k inžinierskemu dielu Created: 23/Nov/21 Updated: 23/Nov/21 Resolved: 23/Nov/21.....	103
↳ [AMS-107] Vytvorenie articles db na virtualnej masine Created: 21/Nov/21 Updated: 21/Nov/21 Resolved: 21/Nov/21.....	104
↳ [AMS-106] Analyza shard, nodes Created: 16/Nov/21 Updated: 21/Nov/21 Resolved: 21/Nov/21.....	105
↳ [AMS-105] Analyza River plugin Created: 16/Nov/21 Updated: 16/Nov/21 Resolved: 16/Nov/21.....	106
[AMS-103] Rozšírenie docker compose o MongoDB a Elasticsearch Created: 15/Nov/21 Updated: 21/Nov/21 Resolved: 21/Nov/21.....	107

[AMS-102] Deployment scraperu Created: 15/Nov/21 Updated: 29/Nov/21 Resolved: 28/Nov/21	109
↳ [AMS-101] vytvorit komprimovanu collection z main.py a zmerať čas indexovania Created: 12/Nov/21 Updated: 16/Nov/21 Resolved: 16/Nov/21	111
↳ [AMS-100] Vytvorit config pre articles_index Created: 12/Nov/21 Updated: 12/Nov/21 Resolved: 12/Nov/21	112
↳ [AMS-99] Skonzultovať komentáre v storke Created: 12/Nov/21 Updated: 15/Nov/21 Resolved: 15/Nov/21	113
↳ [AMS-98] Napísať dokumentáciu do README.md Created: 12/Nov/21 Updated: 16/Nov/21 Resolved: 16/Nov/21	114
↳ [AMS-97] Vytvorenie docker-compose súboru s MongoDB, Elasticsearch a Kibana Created: 12/Nov/21 Updated: 12/Nov/21 Resolved: 12/Nov/21	115
[AMS-95] Implementácia dummy Flask API Created: 09/Nov/21 Updated: 15/Nov/21 Resolved: 15/Nov/21	116
[AMS-94] Návrh Flask API Created: 09/Nov/21 Updated: 26/Nov/21 Resolved: 15/Nov/21	117
[AMS-93] Analýza možností implementácie testovania Created: 09/Nov/21 Updated: 23/Nov/21 Resolved: 23/Nov/21	125
[AMS-92] Zabezpečenie komunikácie medzi klientom a serverom Created: 09/Nov/21 Updated: 23/Nov/21 Resolved: 23/Nov/21	128
[AMS-91] Úprava dokumentácie zo stretnutí a šprintov tak, aby mohli ísť na stránku tímu Created: 09/Nov/21 Updated: 23/Nov/21 Resolved: 23/Nov/21	129
[AMS-90] Integrácia MongoDB a Elasticsearch Created: 09/Nov/21 Updated: 16/Nov/21 Resolved: 16/Nov/21	130
[AMS-89] Integrácia scraperu a vylepšeného parseru Created: 09/Nov/21 Updated: 23/Nov/21 Resolved: 22/Nov/21	132
[AMS-88] Rozšíriť úložisko pomocou nepriradeného disku Created: 09/Nov/21 Updated: 23/Nov/21 Resolved: 14/Nov/21	134
[AMS-87] Zabrániť zacykleným buildom Created: 07/Nov/21 Updated: 22/Nov/21 Resolved: 15/Nov/21	135
↳ [AMS-74] Sekvenčné scrapovanie Created: 02/Nov/21 Updated: 08/Nov/21 Resolved: 06/Nov/21	136
[AMS-73] Vyhľadanie RSS dvojčiat a k HTML článku - všeobecný postup Created: 02/Nov/21 Updated: 23/Nov/21 Resolved: 09/Nov/21	138
[AMS-72] Technický návrh developerského prostredia Created: 02/Nov/21 Updated: 25/Nov/21 Resolved: 24/Nov/21	139
[AMS-71] Napájanie MongoDB priamo pri scrapovaní Created: 02/Nov/21 Updated: 23/Nov/21 Resolved: 14/Nov/21	140

[AMS-70] Rozšírenie google news scrapperu na lokáciu UK Created: 02/Nov/21 Updated: 02/Nov/21 Resolved: 02/Nov/21	141
↳ [AMS-66] Ako mongoDB pracuje s vopred komprimovaným textom Created: 01/Nov/21 Updated: 01/Nov/21 Resolved: 01/Nov/21	142
↳ [AMS-65] vyskusat nad datach Created: 01/Nov/21 Updated: 01/Nov/21 Resolved: 01/Nov/21	143
↳ [AMS-64] realne kniznice Created: 01/Nov/21 Updated: 01/Nov/21 Resolved: 01/Nov/21	145
↳ [AMS-63] elastic search a komprimacia Created: 01/Nov/21 Updated: 01/Nov/21 Resolved: 01/Nov/21	146
↳ [AMS-62] analyza vyhľadavania nad komprimovaným textom Created: 01/Nov/21 Updated: 01/Nov/21 Resolved: 01/Nov/21	147
↳ [AMS-61] bezstratova kompresia text Created: 01/Nov/21 Updated: 01/Nov/21 Resolved: 01/Nov/21	148
[AMS-60] Pamäťová zložitosť elastic search na vzorke dát Created: 01/Nov/21 Updated: 12/Nov/21 Resolved: 12/Nov/21	149
[AMS-59] Parsovanie tagov pomocou lxml, readability, trafiletura Created: 30/Oct/21 Updated: 09/Nov/21 Resolved: 09/Nov/21	151
[AMS-57] Zavesenie klienta Created: 27/Oct/21 Updated: 07/Nov/21 Resolved: 07/Nov/21	154
↳ [AMS-56] NGINX konfigurácia Created: 27/Oct/21 Updated: 31/Oct/21 Resolved: 31/Oct/21	155
↳ [AMS-55] Kontajner Express server Created: 27/Oct/21 Updated: 31/Oct/21 Resolved: 31/Oct/21	156
↳ [AMS-54] Kontajner Flask API Created: 27/Oct/21 Updated: 30/Oct/21 Resolved: 30/Oct/21	157
[AMS-53] Rozšíriť docker compose Created: 27/Oct/21 Updated: 31/Oct/21 Resolved: 31/Oct/21	158
[AMS-51] Pridať info o projekte a opísať členov tímu Created: 27/Oct/21 Updated: 02/Nov/21 Resolved: 01/Nov/21	160
[AMS-50] Request URL s odpoveďou inou ako 200 uložiť do súboru Created: 27/Oct/21 Updated: 23/Nov/21 Resolved: 01/Nov/21	161
[AMS-49] Lokálna MongoDB so získanými dátami Created: 27/Oct/21 Updated: 23/Nov/21 Resolved: 01/Nov/21	162
[AMS-48] Analýza bezstratovej kompresie textu Created: 27/Oct/21 Updated: 01/Nov/21 Resolved: 01/Nov/21	165
[AMS-47] Parsovanie tagov pomocou regex Created: 27/Oct/21 Updated: 02/Nov/21 Resolved: 02/Nov/21	167

[AMS-46] Parsovanie tagov pomocou CSS Selector Created: 27/Oct/21 Updated: 08/Nov/21 Resolved: 08/Nov/21.....	168
[AMS-44] Stránka tímu Created: 18/Oct/21 Updated: 22/Nov/21 Resolved: 01/Nov/21 ..	170
[AMS-43] Otvorenie portov na serveri Created: 18/Oct/21 Updated: 22/Nov/21 Resolved: 18/Oct/21	171
[AMS-39] Vyriešiť, aby fiitkar nemohol urobiť "sudo su" na virtuálnom stroji (aby nemal šancu sa zmeniť na roota) Created: 13/Oct/21 Updated: 22/Nov/21 Resolved: 19/Oct/21	172
[AMS-35] Prieskum databáz Created: 13/Oct/21 Updated: 22/Nov/21 Resolved: 18/Oct/21	173
[AMS-34] Vytvorit' github projekt Created: 13/Oct/21 Updated: 22/Nov/21 Resolved: 18/Oct/21	174
[AMS-32] Prihláška na TP CUP Created: 13/Oct/21 Updated: 02/Nov/21 Resolved: 02/Nov/21	175
[AMS-31] Set up elastic search v docker container Created: 13/Oct/21 Updated: 22/Nov/21 Resolved: 16/Oct/21	176
↳[AMS-30] Redukcia a kategorizácia zoznamu zločinov Created: 13/Oct/21 Updated: 23/Nov/21 Resolved: 23/Nov/21	178
[AMS-29] Získanie dát pre prototyp Created: 13/Oct/21 Updated: 23/Nov/21 Resolved: 26/Oct/21	179
[AMS-21] Vytvorit Slack server Created: 05/Oct/21 Updated: 22/Nov/21 Resolved: 11/Oct/21	181
[AMS-20] Analyza parametrov Google News Created: 05/Oct/21 Updated: 22/Nov/21 Resolved: 13/Oct/21	182
↳[AMS-17] API / scrapovanie Created: 05/Oct/21 Updated: 10/Oct/21 Resolved: 10/Oct/21	183
↳[AMS-16] Získanie vzorky RSS Created: 05/Oct/21 Updated: 08/Oct/21 Resolved: 08/Oct/21	184
[AMS-15] Realny scrapping - vytvorenie vzorky Created: 05/Oct/21 Updated: 22/Nov/21 Resolved: 10/Oct/21	186
[AMS-13] Zistiť, ktoré miestnosti su na karticky Created: 05/Oct/21 Updated: 22/Nov/21 Resolved: 18/Oct/21	187
[AMS-11] Lofi používateľského rozhrania - main page Created: 05/Oct/21 Updated: 20/Feb/22 Resolved: 20/Feb/22	188
[AMS-10] Revizia požiadaviek Created: 05/Oct/21 Updated: 22/Nov/21 Resolved: 13/Oct/21	189
[AMS-9] Spísať denník z prvého stretnutia s vedúcim Created: 03/Oct/21 Updated: 22/Nov/21 Resolved: 05/Oct/21	190
[AMS-8] Pripady použitia Created: 01/Oct/21 Updated: 22/Nov/21 Resolved: 05/Oct/21	191

[AMS-7] Prieskum ziskavania dat, praca s kniznicou Created: 01/Oct/21 Updated: 23/Nov/21 Resolved: 05/Oct/21	192
[AMS-6] Specifikacia poziadaviek Created: 01/Oct/21 Updated: 22/Nov/21 Resolved: 03/Oct/21	193
[AMS-5] Vysoka architektura Created: 01/Oct/21 Updated: 22/Nov/21 Resolved: 03/Oct/21	194
[AMS-4] Zaobstarat stroj v škole Created: 01/Oct/21 Updated: 22/Nov/21 Resolved: 13/Oct/21	195
[AMS-3] Zoznam trestnych cinov, ktore budu pouzite ako queries na google news Created: 01/Oct/21 Updated: 22/Nov/21 Resolved: 04/Oct/21	196
[AMS-146] Stránkovanie článkov na frontende Created: 19/Feb/22 Updated: 11/Mar/22	197
[AMS-142] Základná user tabuľka v user databáze Created: 19/Feb/22 Updated: 10/Mar/22	199
[AMS-147] Refaktoring MongoDB Created: 19/Feb/22 Updated: 10/Mar/22.....	201

Description

Nas projekt obsahuje niekoľko sucasti ktore su privelmi male na to, aby mali samostatny repozitar. Sem spadaju Dockerfiles pre mongo, postgres, elastic, ich init scripty.

Podobne sucasti pravdepodobne casom pribudnu a je potrebne aj tieto male sucasti zalohovat do spolocneho repozitara.

Comment by [Adam Šípka](#) [23/Nov/21]

Google Translate API je spoplatnené od istého množstva preložených znakov, avšak existujú aj varianty, ktoré sú zadarmo a majú dostatočnú podporu jazykov (t. j. všetky, alebo väčšina jazykov štátov Európskej únie)

Comment by [Adam Šípka](#) [23/Nov/21]

Väčšina iných zdrojov je buď obmedzená na určitý počet requestov za deň, alebo je spoplatnená. Prípadne sa jedná o príliš špecifické zdroje, ako napríklad New York Times, čiže by sme mali jednostranne zamerané dáta.

Comment by [Jakub Hlavačka](#) [07/Mar/22]

Ked modul scraper ulozi clanok do MongoDB, tak nasledne posle request Elasticu, aby ho zaindexoval.

Funguje to cez database.py nie cez Scrapy pipelines (ked tak prerobit)

TODO pred review:

- napisat dokumentaciu
- pridat env v produkcnej masine
- zistit, preco Scraper vypisuje logy z elasticsearch a nie tie nase

Comment by [Jakub Hlavačka](#) [08/Mar/22]

samotny text field v elastic nie je ulozeny, ale zistil som, ze sa v source automaticky jeho hodnota uklada.

Na linku su popisane nevyhody, ked text field v source prestaneme ukladat.

<https://www.elastic.co/guide/en/elasticsearch/reference/current/mapping-source-field.html>

Comment by [Jakub Hlavačka](#) [08/Mar/22]

Ukladaju sa uz clanky do ams_db v MongoDB alebo stale do admin ?

V buducnosti by sa mohlo zrusit reverse proxy na MongoDB a Postgres na produkcii. Pretoze sa do databazy pripaja cez ssh tunneling, tym padom by to malo fungovat bez toho

Comment by [Jakub Hlavačka](#) [03/Mar/22]

Neskor zabezpecit, aby sa data tahali iba na prvý docker-compose up.

premenne prostredia boli presunute do externych konfiguracnych suborov. Bol vytvoreny specialny subor s premennymi suvisiacimi s pripojenim akehokolvek servicu na mongoDB. Tento file by mal pouzít akykolvek service pracujuci s mongoDB, aby sme mohli upraviť udaje suvisiace s databazou na jednom mieste naraz pre všetky služby.

Podobny opstup by mal byt pouzity aj pri elasticu aj pri postgresQL databaze. Subory obsahujuce parametre databazy a podobnych sluzieb by mali byt pomenovane ako <MENO>_connection.env

Za tymto ucelom bolo doposial vytvorene **elastic_connection.env** a **mongo_connection.env**

Comment by [Dominik Horvath](#) [27/Feb/22]

Prva verzia dev prostredia je hotova, dokumentacia je dostupna na https://github.com/FIIT-TEAM8/dev_environment

Comments

Comment by [David Silady](#) [04/Mar/22]

Found in branch: *basic_router*

Comment by [David Silady](#) [04/Mar/22]

Je tam aj zopár fixov na backende.

Comment by [David Silady](#) [04/Mar/22]

Hlavná časť je v:

App.jsx (router - je nested)

index.js (router wrapper - tam sa určuje podľa env premennej, že aka je home)

TitleSearch.jsx (pridaný Outlet pre router [tam, kde je outlet sa vyrenderuje child routa], tiež upravená logika pre

SearchResults.jsx (presunutý apiCall, niekoľko častí zakomentovaných, pretože hlavne paging nefunguje a chyby

vyhledavanie query parametrov)

Comment by [David Silady](#) [04/Mar/22]

Comment by [David Silady](#) [04/Mar/22]

Zakladna route teraz presmeruje na /search, kde sa nachadza komponent <TitleSearch/>

Po vyhladani sa presmeruje na /search/results, cim sa pod <TitleSearch/> na mieste <Outlet/> vyrenderuje <SearchResults/> potom na zaklade parametrov vykona vyhladanie.

Navigácia v react-router@6 sa používa primárne pomocou:

`<Navigate/>`
`useNavigate()`

`<Route/>`

Cesty sa používajú aj relatívne.

Takže ak v TitleSearch (route: `/search`) použijem `navigate('results')`, prejdem do `/search/results`

Strom aktuálnych routov:

- `/`
- `/search`
 - `/results`
- `/example`

Comment by [Táňa Poláková](#) [11/Mar/22]

Router je implementovaný veľmi elegantne, prakticky a je jednoducho rozšíriteľný.

Description

nlTK python knižnica

chceme vidieť pekný výsledok

na 100 článkov

skúsiť viac jazykov

niektoré jazyky aj ručne

Comments

Comment by [Jakub Müller](#) [09/Mar/22]

Named entity recognition bolo testované na 50-tich článkoch, ktoré boli získané z našej databázy. Na identifikovanie požadovaných entít bola použitá knižnica NLTK, ktorá identifikuje

entity ako: osoba, lokácia, organizácia a pod. Bol vytvorený jednoduchý skript, ktorý identifikuje všetky typy menných entít v testovacích článkoch. Výsledok rozpoznávania entít bol vyhodnocovaný ručne a výsledky sú uvedené v prílohe **ner_eval.xlsx**. Daných 50 článkov dokázal skript spracovať za cca 17 sekúnd a je uvedený v prílohe **ner_testing.py**.

Comment by [Táňa Poláková](#) [11/Mar/22]

Storka bola pekne spracovaná, dozvedeli sme sa, akú úspešnosť má knižnica nltk.

Description

<https://www.npmjs.com/package/react-jsonschema-form>

Comments

Comment by [Táňa Poláková](#) [04/Mar/22]

Namiesto pôvodnej odporúčanej knižnice som použila <https://formik.org/docs/overview> , keďže zaručila jednoduchšiu úpravu a jednoduchšie validation handleovanie jednotlivých komponentov v rámci tagu form.

Momentálne je hotová obrazovka prihlásenia a je potrebné dorobiť komunikáciu s aplikačným serverom, ako aj vymyslieť preklik na túto obrazovku z aktuálne dostupných obrazoviek.

Comment by [David Silady](#) [04/Mar/22]

Knižnica môže byť, ale myslím, že úprava cez json by bola stále jednoduchšia, pokiaľ by sa spravil wrapper na RJSF (ja som to v minulosti robil takto nejak <https://github.com/DavidSilady/sitecreator/blob/master/src/Components/JsonSchemaWrapper.js> a šlo to docela fajn). Ale Formik vyzerá tiež dosť powerful a šikovne.

Výzorovo super.

Kód ale asi nie je na githube - neviem ho nájsť. (btw vytvoril som dnes nanovo branch pre sprint6, tak potom by som to mergoval tam a na konci sprintu sa to mergne to mainu)

V rámci modulu indexer som vytvoril jednotkové testy na Elasticsearch a MongoDB.

Prerobil som modul Indexovanie v Inžinierskom diele a dopísal modul Elasticsearch.

Konzultácia stretnutie: Treba písať aj modul MongoDB?

Description

Zabezpečiť komunikáciu medzi Aplikačným containerom a Flask API (data) containerom, aby aplikačný container dokázal spracovať, ukladať, hľadané requesty vzhľadom na užívateľa (napr. história vyhľadávania)

Comments

Comment by [David Silady](#) [07/Dec/21]

Zabezpečená komunikácia medzi aplikačným serverom (ExpressJS) a data API serverom (Flask)

V DEV prostredí sa zatiaľ odkazuje na produkčnú data API:

<https://team08-21.studenti.fiit.stuba.sk/api/v2>

V PROD prostredí (už je možná komunikácia vrámci docker containerov):

http://flask_server:5000/v2

Implementovaná základná funkcionálna pre endpoint:

`/ams/api/data/search/?q=""`

Aktuálne posunie request (všetky query parametre) na

```
{{  
  
{flask_api_host}  
  
/v2/search/  
  
{query_params}  
  
}}
```

Výsledok následne posunie ako response clientovi.

Poznámka:

Možno bude nutné premenovanie NGINX routes k aplikačnému webu a k data API. V aktuálnom stave to dokáže byť celkom mäťúce.

Comment by [Jakub Müller](#) [06/Dec/21]

Bola zabezpečená komunikácia medzi API serverom a Elasticsearchom. Táto komunikácia prebieha tak, že po zadaní dopytu API server nadviaže komunikáciu s Elasticsearchom a pošle mu daný dopyt. Následne Elasticsearch vráti serveru "hity", kde sú uvedené ID-čka dokumentov obsahujúcich hľadaný výraz. Keďže response z Elasticsearchu je vo formáte JSON, tak musia byť ID-čka vyextrahované. Následne sú tieto ID-čka použité na získanie samotných článkov z MongoDB.

Na frontende sa zobrazujú výsledky vyhľadávania vo forme: dátum publikovania, link, názov článku a kľúčové slová. Prvé tri vety článku sa zatiaľ nezobrazujú, keďže k tomu je potrebná implementácia na backende.

Mohli by sme pouvažovať na upravení formy dátumu tak, aby som na frontende nemusela riešiť orezávanie a rovnako by sme mohli skúsiť extrahovať z linku iba odkaz na doménu, pričom preklik by ostal pôvodný.

Komunikácia medzi MongoDB a API serverom bola zabezpečená. ID hodnoty dokumentov získaných z Elasticu sú použité pri vyhľadávaní v databáze a pre každé z nich nám Mongo vráti celý dokument. Pre ten ešte nájdeme kľúčové slová v kolekcii crimemaps a tie priložíme k danému dokumentu. Výsledné články sú poslané ako response vo formáte JSON na NodeJS server.

River plugin a Mongo connector su deprecated pre MongoDB v.4 a Elasticsearch v.7 . Myslim si, ze bude najvhodnejsie pouzit logstash, kedze to je sucast balika elastic.

Zistit ako funguje logstash.

Comment by [Jakub Hlavačka](#) [21/Nov/21]

<https://www.elastic.co/elasticon/conf/2016/sf/quantitative-cluster-sizing> - Tu pisu, ze je vhodne otestovat na zaindexovanych datach scenare zistit, ze kedy jednotlivé shardy pomáhajú a kedy nie... Shary môžu zahliť CPU, pretože vyhľadávanie v každom sharde funguje na samotnom CPU vlakne.

<https://www.elastic.co/guide/en/elasticsearch/reference/current/size-your-shards.html#shard-size-recommendation> - Tu spominaju, ze by sme sa mali snazit drzat velkost jedneho shardu medzi 10GB az 50GB

<https://www.elastic.co/guide/en/elasticsearch/reference/current/size-your-shards.html#shard-count-recommendation> - Tu sa spomina, ze ak jeden node prekroci 20 shardov pre 1GB heap memory, tak sa ma pridat dalsi node

<https://discuss.elastic.co/t/how-many-nodes-should-an-elasticsearch-cluster-have/227674> - Tu opisuju, ze kolko nodov by mal mat cluster a vetu each node is one host (either physical or virtual) som pochopil tak, ze mi budeme mat jeden node.

Vysledok: Cluster ma jeden node, jeden shard a jednu repliku

Navrh na dalsi task <https://www.elastic.co/guide/en/elasticsearch/reference/current/size-your-shards.html#use-ds-ilm-for-time-series> - Zistit nieco o elastic ILM, pretoze pouzivame time series data a zjavne sa to hodi.

Dalsi task zistit, ci sa nam hodi logstash na updateovanie elasticsearch vzdy, ked pride novy zaznam do mognodb zo scrapera. Ak ano, tak ho pouzit.

Comment by [Dominik Horvath](#) [28/Nov/21]

parser bol upraveny na konfiguraciu pomocou argumentov. Deploy bol vyrieseny pomocou scrapyd modulu. Tento modul vytvori jednoduchy HTTP API server nad nasim crawlerom. Cela aplikacia je dockerizovana a bezi na virtualnom stroji timu.

Ovladanie je teda prostrednictvom HTTP API, momentalne pouzitelne len priamo z virtualneho stroja - NGNINX konfiguracia z nejakeho dovodu zabranuje POST requestom z externych sieti. Toto je praca do dalsej story.

Priklad ovladania:

Po prihlaseni na virtualny stroj je mozne spustit nas crawler nasledovnym sposobom:

```
curl localhost:6800/schedule.json -d spider=news_spider -d project=ams -d  
search_from=2021-11-14 -d search_to=2021-11-28 -d locale=en-gb -d  
crimes_file=list_of_crimes.txt
```

Toto spusti crawlovanie dat v danom casovom rozpati so specifikovanim suborom zlocinov.

Cely kod je k dispozicii na [githubu](#).

Poznamka: v README na githubu su argumenty posielane pomocou **-a** prepinača a pri vzorke kodu v tomto komentari je pouzity **-d** prepinač. Nie je to chyba, **-d** pri curl-e iba posielala POST data a samotny server ich automaticky potom prechodi na **-a**. Cize pri lokalnom developmente, ked scrapy nebezi na serveri, pouzivat **-a** argumenty a sposob specifikovany v README.

Versioning: robi sa kvoli supportu starsich zakaznikov v pripade, ze sa nejake poziadavky zmenia a my spravime

Existuju 4 strategie versioningu:

1. URI path versioning - /api/v1/Customers/1 ... /api/v2/Customers/1

2. URL parameter versioning - /api/Categories?v=1.1
3. Content Negotiation - URLs sa nemenia, v accept header vidime, ktora verzia je ta, ktoru chceme:
 1. Accept: application/app.v1.categories
 2. Accept: application/app.v2.categories
4. Custom Header:
 1. x-App-version: 1.3
 2. x-App-version: 2017-08-12

Continuous versioning - neexistuju ziadne verzie, iba json responses vzdy nejak prisposobime, aby obsahovalo p...
sme pridali na zaklade zmenenych poziadaviek (viac: <https://www.youtube.com/watch?v=M2KCu0Oq3JE>).

Comment by [Táňa Poláková](#) [14/Nov/21]

Dokumentáciu je vhodné písať/generovať, až keď sú requesty implementované.

Postman

Vyhody

- intuitívne grafické rozhranie dostupné aj cez prehliadač
- podpora kolaborácie
- testovanie API

Nevyhody

- výsledná dokumentácia je dostupná cez postman URL a nie cez našu vlastnú - to sa dá len pri PRO verzii
- response json sa neda dokumentovať

Ukazka dokumentacie

Ako funguje

1. nainstalujeme si Postman (<https://www.postman.com/downloads/>)
2. do timoveho workspace sa vieme dostat cez invite link dostupny na nasom drive
3. vytvorime si collection, kam budu spadat nase implementovane requesty, mozeme vytvorit aj viac kolekci
4. nasa Collection je vlastne subor nasich requestov, ktoru vieme ako celok zdokumentovat - vieme jej dat nazov
Collections - nam asi bude stacit len Collection "Articles"
5. v ramci kolekcie si vytvorime vsetky implementovane requesty - rozdelené aj podla metod
6. pri kazdom requeste vieme pridat description, query parametre, ulozit, ako vyzera priklad json response

Flask-RESTPlus

Rozsirenie pre Flask, dostupne cez pip: pip install flask-restplus

<https://www.imaginarycloud.com/blog/flask-python/>

Vyhody

- vacsinu si naprogramujeme sami
- dokumentacia moze byt na nasej domene
- kolaboracia je mozna vlastne len tak, ze pristupujeme k spolocnemu kodu
- response json sa da dokumentovat

Nevyhody

- vacsinu si naprogramujeme sami
- nie je graficke rozhranie
- vysledny vzhľad dokumentacie sa mi nepaci (😞)
- testujeme iba cez konzolu

Ukazka kodu

Ukazka dokumentacie

Typy testovania:

1. Functional Testing
2. Usability testing -zatiaľ netreba
3. Interface testing
4. Compatibility testing - zatiaľ netreba
5. Performance testing - zatiaľ asi netreba
6. Security testing - zatiaľ asi netreba

Functional Testing

Toto testovanie kontroluje UI, API, databázu, bezpečnosť, klient/server komunikáciu a fungovanie aplikácie.

a) Unit testing

Účelom je otestovať každú funkciu poskytnutím vhodného vstupu a overením výstupu vzhľadom na funkčné požiadavky. Testujeme malé časti softvéru, vykonáva sa ako prvé Frameworky na testovanie Node.js aplikácií:

- Mocha
- Jest
- Chai
- Jasmine
- AVA
- Pre Python:
- unittest + Nose2 a Testify (optional)
- PyTest
- DocTest

Ako písať ľahko testovateľný kód:

- deterministické funkcie: výstupná hodnota závisí od vstupnej a nie od skrytých premenných v danej funkcii
- Inversion of Control technika: oddeliť decision making kód (kedy a za akých podmienok sa niečo vykoná) a action kód (čo sa za vykoná)
- Dependency Injection: Objekt (client) prijíma ďalšie objekty (services/dependencies) od ktorých je závislý. Kód kde je service vložený (injector) určí clientovi, akú službu bude používať, namiesto toho, aby si to client určil sám.

```
public class SmartHomeController
{
    private readonly IDateTimeProvider _dateTimeProvider; // Dependency

    public SmartHomeController(IDateTimeProvider dateTimeProvider)
    {
        // Inject required dependency in the constructor.
        _dateTimeProvider = dateTimeProvider;
    }

    public void ActuateLights(bool motionDetected)
    {
        // Delegating the responsibility
        DateTime time = _dateTimeProvider.GetDateTime();

        ...
    }
}
```

b) Integration testing

Jednotlivé moduly sú skombinované a otestované ako celok. Zamerané na presun dát medzi modulmi.

Ak medzi niektorými už existuje prepojenie/funkcionalita a ostatné nie sú hotové, môžeme

existovať existujúce. Cieľom je odhaliť chyby v interakciách medzi modulmi, keďže tie sú zväčša písané rozdielnymi ľuďmi.

Rank:	0 i000kr:

Description

Je potrebné vylepšiť parser z predošlého šprintu (konkrétne z tasku “Parsovanie tagov pomocou CSS Selector”) a integrovať ho do nášho scraperu.

Comments

Comment by [Jakub Müller](#) [23/Nov/21]

Parser bol integrovaný bez nejakých problémov, keďže bol vytvorený pomocou knižnice Scrapy, ktorá je použitá aj pri samotnom scraperi.

Comment by [Jakub Müller](#) [23/Nov/21]

Vylepšenie parseru sa týkalo odstránenia nepotrebných dát z tagov paragrafov a headingov, ktoré boli vyselektované pomocou XPATH selektora. Tieto nepotrebné dáta predstavovali atribúty daných tagov (teda napríklad classy, ID-čka a rôzne iné špecifikácie), ktoré nepotrebujeme, pretože nijako neovplyvňujú formu nášho výsledného HTML súboru.

Comment by [Jakub Müller](#) [23/Nov/21]

Na odstránenie týchto atribútov bolo vyskúšaných viacero spôsobov. Bolo skúmané, či sa nedajú jednoducho odignorovať už pri samotnom selektovaní tagov pomocou **XPATH** selektora. Toto sa ukázalo ako nemožné. Následne bolo skúšané odstraňovanie atribútov pomocou **regex**-ov a aj pomocou **listových operácií** v Pythone.

Nakoniec sa ukázalo, že riešenie pomocou listových operácií bolo najlepšie. Následne sa tiež kontrolovalo, či daný tag má vôbec nejaký obsah a ak nie, tak sa celý odstránil.

Comment by [Jakub Müller](#) [23/Nov/21]

Toto riešenie bolo testované na rovnakom súbore ako pôvodný parser (1_articles.jl, ktorý mal veľkosť približne 3,5GB). Pôvodný parser dokázal zredukovať daný súbor o cca **92%** a vylepšený parser ho dokázal zredukovať o **93%**, teda o približne 1% viac, pričom sa nestratili žiadne potrebné informácie z daných HTML súborov. Tento vylepšený parser taktiež dokázal spracovať tieto články v približne rovnakom čase ako pôvodný a to za cca **3 minúty**.

Detailné výsledky testovania vylepšeného parseru sú uvedené v prílohe **improved_parser_measurments.txt**

Comment by [Dominik Horvath](#) [06/Nov/21]

Sekvenčne scrapovanie bolo skusane pomocou viacerých prístupov, a to BeautifulSoup knižnica, LXML knižnica spolu s [XPATH |<https://www.w3.org/TR/1999/REC-xpath-19991116/>]selector standardom a taktiež [python-fork reader-view](#) pluginu obsiahnutom v prehliadaci firefox.

BeautifulSoup knižnica nebola dostacujuca. Na jednu stranu bola velmi pomala + vyzadovala zlozity kod na extrahovanie len tych atributov, ktore su pre nas zaujimave.

Fork readerview pluginu fungoval perfektne, jeho vytvorene vzorky fungovali 99% pripadov tak ako v prehliadaci, avsak bol velmi pomaly - datovu sadu 1_articles.zip spracovaval asi 4 hodiny, kde sa nedostal ani do polovice clankov. Nasledne som program vypol.

LXML knižnica spolu s XPATH selectorom fungovala najlepsie. Bola vytvorena tato vyhľadavacia query:

```
"//p | //h1 | //h2 | //h3 | //h4 | //h5 | //h6"
```

ktora zoberie všetky stanovené HTML tagy v pôvodnom poradí, ako boli v dokumente. Knížnica bola veľmi rýchla a redukcia dát významná (príloha timing.txt)

V prílohe **data.zip** sa nachádza spracovaných prvých 100 záznamov z datovej sady 1_articles.zip a tiež zdrojový kód. V priečinku **parsed** sa nachádza 100 HTML súborov, jeden pre každú spracovanú stránku. V súbore **articles_sample_links.txt** sa pre možnosť kontroly nachádzajú odkazy na pôvodné články. HTML súbory majú v názve číslo riadku, na ktorom sa v súbore **articles_sample_links.txt** nachádza odkaz k pôvodnému článku.

Bohužial, nič v podobnej sfere v dnešnej dobe neexistuje. Existujúce citácky RSS streamov potrebujú priamy odkaz na stream konkrétneho webu, nedokážu získať stream URL len z "base" URL domény. Taktiež každý portál obsahuje vlastné štruktúry pre RSS stream URL, ich tvar nie je štandardizovaný.

V dnešnej dobe je taktiež náradne najštruktúrovaný RSS stream, čiže RSS stream obsahujúci aj telo samotného článku, nielen metadáta o nom. Vzhľadom na to, že väčšina RSS streamov obsahuje len odkaz na samotný článok, tento postup by nám neposkytol žiadnu výhodu oproti terajšiemu prístupu.

Je nutné vytvoriť inicializačné skripty pre DEV databázy s dummy dátami.

docker-compose má obmedzené scripting ability, ale je možné podľa prepínačov nastavovať systémové premenné

Aktuálny návrh:

Pri spustení docker-compose sa špecifikuje, na ktorom containeri sa bude robiť development, to si developer naclonuje k sebe manuálne.

Ostatné containery sa spustia so system variable DEV=true, kde v prípade, že sa v DEV prostredí majú správať inak ako v PROD (napr. databázy), vykonajú inú/upravenú verziu inicializácie.

Podarilo sa mi upraviť scraper tak, aby sa získané dáta hneď ukladali do Mongo databázy. Momentálne sa jedná len o lokálnu databázu umiestnenú na mojom osobnom zariadení. Nebude problém neskôr zmeniť, stačí v súbore settings.py upraviť nasledovné premenné (+ pridať heslo):

```
# db server and port (local for now)
MONGODB_SERVER = "localhost"
MONGODB_PORT = 27017
```

Databáza je tvorená z 3 kolekcií (articles, crimemaps a errorlinks). Okrem automatického indexu *_id*, ktoré tvorí mongo automaticky, som v každej kolekcií nastavil field *link* na unikátny index, aby sa zabránilo duplikátom.

Zobrat dump od [Adam Šípka](#) a spravit index v elastic search, pricom jednotlivé values pre terms budu ID zo zaznamov v MongoDB

Comments

Comment by [Jakub Hlavačka](#) [07/Nov/21]

Neskôr by bolo vhodné použiť asi toto <https://hevo.com/learn/integrating-elasticsearch-and-mongodb/>

Comment by [Jakub Hlavačka](#) [08/Nov/21]

Mam zatiaľ vytvorený docker-compose, kde je mongodb a elasticsearch s ich vlastnými volumes. Mongo má col clanky z articles_1.zip . K tasku prikladám script, pomocou ktorého som čítal z mongodb a snažil sa vytvárať index

Posting list sa mi zatiaľ nepodarilo naimplementovať, pretože elasticsearch analyzér má obmedzenie pre tokenizáciu

Aby som aspoň hrubým odhadom zistil pamäťovú zložitosť vytvoreného indexu v elasticsearch, tak som vkladal jeho kľuč bola id z mongodb... Pricom po nejakom 650 clanku vybehol nasledovný error

Navrhujem dalsi postup:

- vyriesit problem s obmedzenim tokenizacie
- vytvarat uz rovno index (posting list), ktory budeme vyuzivat v AMS
- vytvorit dalsi task na analyzu nastroja z <https://hevo.com/learn/integrating-elasticsearch-and-mongo>
- Alokovat viac casu !!!

EDIT: pridane navrh na dalsi tak s nastrojom.

Comment by [Jakub Hlavačka](#) [12/Nov/21]

Z 308MB clankov spravil elasticsearch 244MB.

Comment by [Táňa Poláková](#) [07/Nov/21]

Readability - funguje iba na zaklade nazvov tagov a tried, nie na zaklade jazyka textu - funkcia summary() extrahuje hlavny obsah HTML stranky. Ako prve vymaze vsetky script alebo style tagy. Nasledne maze tagy na zaklade regexov:

```
{ {'unlikelyCandidatesRe':  
re.compile('combx|comment|community|disqus|extra|foot|header|menu|remark|rss|shoutbox|sidebar|sponsor|ad-  
break|agegate|pagination|pager|popup|tweet|twitter',re.I), 'okMaybeItsACandidateRe':  
re.compile('and|article|body|column|main|shadow',re.I),} }  
  
if (  
    REGEXES["unlikelyCandidatesRe"].search(s)
```

```
and (not REGEXES["okMaybeItsACandidateRe"].search(s))
and elem.tag not in ["html", "body"]
):
    log.debug("Removing unlikely candidate - %s" % describe(elem))
    elem.drop_tree()
```

Potom pridava score tagom na zaklade urcitych kriterii:

```
def class_weight(self, e):
    weight = 0
    for feature in [e.get("class", None), e.get("id", None)]:
        if feature:
            if REGEXES["negativeRe"].search(feature):
                weight -= 25

            if REGEXES["positiveRe"].search(feature):
                weight += 25

            if self.positive_keywords and self.positive_keywords.search(feature):
                weight += 25

            if self.negative_keywords and self.negative_keywords.search(feature):
                weight -= 25

        "nav",
    ]:
        content_score -= 5
    return {"content_score": content_score, "elem": elem}
```

Vyberie sa najlepší kandidát na základe score a potom sa hľadajú susedné elementy, ktoré by s najlepším kandidátom mohli súvisieť.

Comment by [Táňa Poláková](#) [08/Nov/21]

Readability - pri 20-tich článkoch nesedel jeden extrahovaný s pôvodným článkom. Extrahovaný hlavný obsah bol nezmysel - iba svg obrázky.

V kóde nemajú veľkú váhu headings, čo by bolo možné upraviť pre naše potreby. Všeobecne mi ale pride, že v kóde je bordel - veľa zakomentovaných vecí.

Comment by [Táňa Poláková](#) [08/Nov/21]

Trafilatura - všetkých 20 článkov obsahovalo hlavný content - aj ten, ktorý readability nezvládol. Zaujímavosťou bolo, že v kóde použili readability a na základe dĺžky extrahovaného textu sa rozhodli, či použijú svoj alebo readability algoritmus.

Rozdiel je, že trafilatura vracia iba holý text, bez tagov.

Comment by [Táňa Poláková](#) [08/Nov/21]

Readability funguje rovnako pre anglické aj slovenské články.

Príklad:

(zdroj: <https://www.cas.sk/clanok/2603841/brutalna-dvojnashobna-vrazda-v-lednickych-rovniach-kedy-sa-zacne-proces-s-obzalovanim/>)

[2 sk article.html](#)[□]

Trafilatura tiež.

Vytvorene 2 github repozitare: [node server](#) a [flask server](#). Oba repozitare obsahuju github actions procedury nakonfigurovane tak, aby sa spustili pri pushnuti / mergnuti do main branche.

Github actions vykonaju build kontajneru z aktualnej main branch, nahra hotovy image na docker-hub a nasledne nacita najnovsie docker image aj na timovy virtualny stroj, kde ich rovno spusti a nahradi stare kontajnery.

Nove cesty v nginx reverse proxy:

- /api => flask server
 - /ams => node server
-

Description

Naše získané dáta (všetky fields) dať do lokálnej MongoDB, zistiť, aké sú možnosti práce s ňou, koľko miesta zaberá na disku - uvidíme, ako naše dáta Mongo zredukuje. Zistiť, ako je tvorené ID.

Comments

Comment by [Adam Šípka](#) [23/Nov/21]

Veľkosť pôvodných dát: 28,3 GB (3,53 + 4,75 + 4,94 + 4,56 + 4,66 + 5,87)

Veľkosť databázy (bez extra kompresie): 9,028870144 GB

Veľkosť databázy (dodatočná kompresia): 5,791744000 GB

Počet záznamov: 228,774 (articles_all)

Bez komprimovania (úplne basic databáza):

"db" : "articledata", meno databázy

"collections" : 1, počet kolekcií (niečo ako tabuľka v SQL databázach)

"views" : 0,

```
"objects" : 228774, počet všetkých dokumentov vo všetkých kolekciách
"avgObjSize" : 125179.16999746475, priemerná veľkosť 1 dokumentu
"dataSize" : 28637739437, veľkosť všetkých dokumentov (neskomprimovaných)
"storageSize" : 9025990656, priestor alokovaný všetkým kolekciám v databáze vrátane voľného miesta (bez indexov)
"freeStorageSize" : 2019328,
"indexes" : 1, počet indexov (1 automaticky vytvorený - niečo ako id, unikátny pre každý dokument)
"indexSize" : 2879488, priestor alokovaný pre indexy
"indexFreeStorageSize" : 163840,
"totalSize" : 9028870144, súčet indexSize a storageSize (veľkosť databázy)
"totalFreeStorageSize" : 2183168,
"scaleFactor" : 1,
"fsUsedSize" : 511983788032, využitá veľkosť disku kde mongo ukladá veci
"fsTotalSize" : 984432504832, celková veľkosť disku kde mongo ukladá veci
"ok" : 1
```

Databáza kde bola kolekcia vytvorená s dodatočnou kompresiou dát:

```
db.createCollection('collectionName', {storageEngine: {wiredTiger: {configString:
'block_compressor=zlib'}}})
"db" : "articlescompressed",
"collections" : 1,
"views" : 0,
"objects" : 228774,
"avgObjSize" : 125179.16999746475,
"dataSize" : 28637739437,
"storageSize" : 5788897280,
"freeStorageSize" : 1695744,
"indexes" : 1,
"indexSize" : 2846720,
"indexFreeStorageSize" : 118784,
"totalSize" : 5791744000,
"totalFreeStorageSize" : 1814528,
"scaleFactor" : 1,
"fsUsedSize" : 517487702016,
"fsTotalSize" : 984432504832,
"ok" : 1
```

vytvorenie databázy a kolekcie cez mongo shell (s extra kompresiou)

```
use dbName
```

```
db.createCollection('collectionName', {storageEngine: {wiredTiger: {configString:
'block_compressor=zlib'}}})
```

import dát cez command line

```
mongoimport --db dbName --collection collectionName --file fileName
```

Mongo vygeneruje unikátne id pre každý dokument sám, ale asi bude lepšie použiť url ako unikátne id, aby sme zabránili duplikátom. Alebo sa to vyrieši ešte pri scrapovaní dát, navštívené linky už nebudeme scrapovať.

Description

Pomocou CSS Selector je potrebné vyskúšať parsovať tagy, ktoré obsahujú text

Comments

Comment by [Jakub Müller](#) [08/Nov/21]

Pri analýze CSS selektora z knižnice *scrapy* sa ukázalo, že pre náš účel nebude dostačujúci. Je to z toho dôvodu, že tento selektor dokáže selektovať iba jednotlivé tagy zvlášť a my potrebujeme všetky tagy, ktoré obsahujú text (teda `<p>` a všetky `<h>` tagy) a v pôvodnom poradí.

Preto sme sa namiesto CSS selektora z knižnice *scrapy* zamerali na selektor *XPATH* z tejto knižnice.

Tento selektor dokáže vyselektovať všetky tagy s textom (teda paragrafy a headingy) v takom

poradí, v
akom sú uvedené v pôvodnom HTML súbore.

Výsledný parser bol testovaný na vzorke dát 1_articles.jl, ktorá má cca 3.7GB a obsahuje cca 27 000 článkov. Celú túto vzorku dát dokázal parser spracovať za necelé 3 minúty, pričom dokázal znížiť veľkosť výsledného súboru o cca 92%.

Detailnejšie výsledky parseru sú uvedené v prílohe **scrapy_xpath_mearuments.txt** a príklad výsledného HTML súboru, z ktorého bol vyselektovaný iba text je v prílohe **example.html**

Comment body is empty.

Pre spustenie je potrebne byt v adresari /home/fiitkar/docker-folder a odpalit command: *sudo docker-compose up*

Prepinac -d zabezpeci, ze sa proces spusti na pozadi.

Command na zastavenie a zmazanie docker kontajneru: *sudo docker-compose down*

Nerobit: *sudo docker-compose down -v* , pretoze to zmaze volume, v ktorom su ulozene naindexovane data.

Vytvoreny custom parser: <https://github.com/Dominik1799/gnewsParser>

Vsetky kniznice, ktore sme nasli, pracovali len ako wrapper nad RSS streamom. Vyuzivali funkcie, ktore su pre nas problem zbytocne, a boli preto velmi pomale.

Vlastny parser uskutocnil 1827 requestov a ziskal 35772 zaznamov za 93 sekund processing time a cca 20 minut realneho casu. Vyhľadavacia query ziskala vsetky clanky v casovom období od 10.10.2016 do 10.10.2021 na klucove slova "Jeffrey Epstein".

získanie RSS a zistenie, či je to efektívne alebo nie

+ časovanie všetkeho, čo sa vykona

Comments

Comment by [Jakub Hlavačka](#) [08/Oct/21]

RSS vrati 100 clankov na danu query.

Total time: 0.046875

Malo by to byt v sekundach.

Ak sa vyberieme touto cestou, tak bude zjavne potrebne sa dostat k dalsim clankom a nie len prvym 100, ktore to vyhodi...

Podarilo sa mi vytvorit' prvotný script na zber dát, ktorý pracuje s knižnicou GoogleNews a newspaper3k. Avšak nie vždy sa nám podarilo získať samotný text článku, hlavne ak sa jednalo o iný jazyk ako angličtina. Ďalším problémom bola rýchlosť získavania samotných tiel článkov, ktorá celý proces podstatne spomalila.

Description

Na jednu stranu 10 článkov.

Frontend bude posielat' request s číslom požadovanej stránky.

Comments

Comment by [Táňa Poláková](#) [11/Mar/22]

Pri prvom requeste pre hľadaný výraz je automaticky do parametrov pridaný parameter "page" s hodnotou 1. Následne po kliknutí na ďalšie strany je parameter upravený podľa aktuálneho čísla strany a prebehne nový request na server.

Request na server (vždy po zmenení parametrov v route):

Update aktualnej stranky:

Description

Prichystať novovytvorenú DB - *ams*.

Prepis calls na API.

Príprava inicializačného scriptu.

Comments

Comment by [Dominik Horvath](#) [26/Feb/22]

MongoDB vytvori databazu az ked su v nej nejake data, nie je potrebne pripravit infrastrukturu dopredu, bude stacit vlozit zdrojove kody v komponentoch, ktore s databazou pracuju.

Comment by [Dominik Horvath](#) [06/Mar/22]

Custom image pre mongoDB bol vytvoreny + pushnuty na docker-hub <https://hub.docker.com/r/fiitteam8/mongo>
