

## Export úloh 25. 03. 2022

### Obsah

TO DO.....	9
[AMS-203] Náhľad článku Created: 24/Mar/22 Updated: 24/Mar/22.....	9
[AMS-202] Zobrazenie archivovaného článku Created: 24/Mar/22 Updated: 24/Mar/22 ...	10
[AMS-201] Spustenie scraperu na veľa dátach Created: 24/Mar/22 Updated: 24/Mar/22 ...	11
[AMS-200] Prerobiť developerské prostredie Created: 24/Mar/22 Updated: 24/Mar/22.....	12
[AMS-199] Sidebar Created: 24/Mar/22 Updated: 24/Mar/22 .....	13
[AMS-198] Frontend keywords Created: 24/Mar/22 Updated: 24/Mar/22 .....	14
[AMS-197] Otestovať filtrovanie Created: 24/Mar/22 Updated: 24/Mar/22.....	15
[AMS-193] Prepojenie servisov Created: 24/Mar/22 Updated: 24/Mar/22.....	16
[AMS-192] Profil používateľa Created: 24/Mar/22 Updated: 24/Mar/22 .....	17
[AMS-191] Update user account data Created: 24/Mar/22 Updated: 24/Mar/22 .....	18
[AMS-190] Zobrazit' iba doménu stránky vo výsledkoch vyhľadávania Created: 20/Mar/22 Updated: 24/Mar/22 .....	19
[AMS-183] Menu pre každý zobrazený článok Created: 10/Mar/22 Updated: 24/Mar/22 ..	20
[AMS-177] Boolean query implementácia Created: 03/Mar/22 Updated: 03/Mar/22 .....	21
[AMS-170] Google analytics Created: 24/Feb/22 Updated: 24/Feb/22.....	22
[AMS-168] Obmedzenie API pre tretiu stranu Created: 24/Feb/22 Updated: 24/Feb/22.....	23
[AMS-166] Prevencia zahľtenia API Created: 24/Feb/22 Updated: 24/Feb/22 .....	24
[AMS-162] PDF report zdieľateľný linkom Created: 24/Feb/22 Updated: 24/Feb/22 .....	25
[AMS-159] Dokumentácia - metodika definition of done Created: 19/Feb/22 Updated: 20/Feb/22.....	26
[AMS-158] Dokumentácia - metodika definition of ready Created: 19/Feb/22 Updated: 20/Feb/22.....	27
[AMS-151] Frontend registrácia Created: 19/Feb/22 Updated: 24/Mar/22.....	28
[AMS-112] Fuzzy search Created: 23/Nov/21 Updated: 20/Feb/22.....	29
[AMS-86] PDF report z nájdených článkov Created: 02/Nov/21 Updated: 24/Mar/22 .....	30
[AMS-85] Prihlásenie sa na odber nejakého vyhľadaného človeka Created: 02/Nov/21 Updated: 20/Feb/22 .....	31
[AMS-83] Hodnotenie risku pri nájdených článkoch Created: 02/Nov/21 Updated: 02/Nov/21 .....	32
[AMS-82] Zvýraznenie hľadaných slovíčok Created: 02/Nov/21 Updated: 02/Nov/21 .....	33
↳[AMS-80] geografická lokácia Created: 02/Nov/21 Updated: 02/Nov/21 .....	34
↳[AMS-79] vyhľadanie na základe zločinov Created: 02/Nov/21 Updated: 17/Mar/22 .....	35

↳[AMS-78] obmedzenie vyhľadavania na základe dátumu vydania článkov Created: 02/Nov/21 Updated: 02/Nov/21 .....	36
[AMS-77] Filter na web stránke Created: 02/Nov/21 Updated: 24/Mar/22 .....	37
↳[AMS-76] Iné možnosti prekladu článkov Created: 02/Nov/21 Updated: 02/Nov/21 .....	38
[AMS-68] Analýza médií, ktoré dostaneme vo výstupoch a aké search queries treba poslať, aby sme mali výsledky ako z Google Created: 02/Nov/21 Updated: 20/Feb/22 .....	39
[AMS-67] Pozrieť sa na zahodené články, kt. neobsahovali paragrafy Created: 02/Nov/21 Updated: 20/Feb/22 .....	40
[AMS-42] Porovnanie výsledkov nášho vyhľadavania s výsledkami Google News Created: 13/Oct/21 Updated: 20/Feb/22 .....	41
[AMS-41] Vyriešiť, čo s článkami, ktoré budú v pôvodnom zdroji nekompletné Created: 13/Oct/21 Updated: 20/Feb/22 .....	42
↳[AMS-38] Zistiť, ako funguje Google Translate API, ako ho vieme použiť Created: 13/Oct/21 Updated: 23/Nov/21 .....	43
[AMS-37] Zistiť, ako fungujú iné zdroje Google News, prípadne aký mechanizmus používa Google News. Created: 13/Oct/21 Updated: 23/Nov/21 .....	44
[AMS-33] Zistiť, čo spája kriminálne články Created: 13/Oct/21 Updated: 20/Feb/22 .....	45
[AMS-19] Analyza - multilingvistika Created: 05/Oct/21 Updated: 27/Oct/21 .....	46
[AMS-12] Nasu API dat na portal verejnych API v ramci propagacie Created: 05/Oct/21 Updated: 27/Oct/21 .....	47
IN PROGRESS .....	48
[AMS-186] Implementácia integračného testu Created: 10/Mar/22 Updated: 24/Mar/22 ...	48
[AMS-185] Komunikácia medzi frontendom a web serverom - poslať autentifikačné a registračné údaje Created: 10/Mar/22 Updated: 24/Mar/22 .....	49
[AMS-182] Dokumentácia web frontendu Created: 10/Mar/22 Updated: 24/Mar/22 .....	50
[AMS-178] Request na MongoDB, ktorý vráti články na základe keywords Created: 03/Mar/22 Updated: 24/Mar/22 .....	51
[AMS-154] Článok IIT.SRC Created: 19/Feb/22 Updated: 24/Mar/22 .....	53
[AMS-138] Dokumentácia User guide Created: 14/Feb/22 Updated: 24/Mar/22 .....	54
[AMS-137] Dokumentácia elasticsearch Created: 14/Feb/22 Updated: 24/Mar/22 .....	55
[AMS-136] Dokumentácia fungovania NGINX Created: 14/Feb/22 Updated: 24/Mar/22 ..	56
[AMS-135] Dokumentácia fungovania dockeru Created: 14/Feb/22 Updated: 24/Mar/22 ..	57
[AMS-134] Dokumentácia node serveru Created: 14/Feb/22 Updated: 24/Mar/22 .....	58
[AMS-36] User databáza + zbieranie aktivity používateľa Created: 13/Oct/21 Updated: 24/Mar/22 .....	59
DONE .....	62

[AMS-189] Prerobiť mongodb Created: 17/Mar/22 Updated: 19/Mar/22 Resolved: 19/Mar/22 .....	62
[AMS-181] Integrácia nového stroja do tímového prostredia Created: 10/Mar/22 Updated: 24/Mar/22 Resolved: 24/Mar/22 .....	63
[AMS-180] Github actions na repo team web page Created: 10/Mar/22 Updated: 19/Mar/22 Resolved: 19/Mar/22 .....	64
[AMS-179] Github repo pre mensie sucasti projektu Created: 06/Mar/22 Updated: 20/Mar/22 Resolved: 20/Mar/22 .....	65
[AMS-175] Vyhľadať v scrapnutom článku všetky keywords Created: 03/Mar/22 Updated: 24/Mar/22 Resolved: 24/Mar/22 .....	66
↳ [AMS-173] ťahanie dát Created: 24/Feb/22 Updated: 03/Mar/22 Resolved: 03/Mar/22	72
[AMS-172] Implementácia developerského prostredia Created: 24/Feb/22 Updated: 03/Mar/22 Resolved: 03/Mar/22 .....	73
[AMS-171] Implementácia routera na frontende Created: 24/Feb/22 Updated: 11/Mar/22 Resolved: 11/Mar/22 .....	75
[AMS-157] Pridať na stránku tímu priestor na dokumenty z LS Created: 19/Feb/22 Updated: 03/Mar/22 Resolved: 03/Mar/22 .....	78
[AMS-156] Preklad keywordov do viacerých jazykov Created: 19/Feb/22 Updated: 24/Mar/22 Resolved: 24/Mar/22 .....	80
[AMS-153] Named entity recognition Created: 19/Feb/22 Updated: 11/Mar/22 Resolved: 11/Mar/22 .....	81
[AMS-149] Frontend obrazovka prihlásenia Created: 19/Feb/22 Updated: 11/Mar/22 Resolved: 11/Mar/22 .....	83
[AMS-148] Update indexovacieho mechanizmu Created: 19/Feb/22 Updated: 17/Mar/22 Resolved: 17/Mar/22 .....	85
[AMS-147] Refaktoring MongoDB Created: 19/Feb/22 Updated: 17/Mar/22 Resolved: 17/Mar/22 .....	87
[AMS-146] Stránkovanie článkov na frontende Created: 19/Feb/22 Updated: 17/Mar/22 Resolved: 17/Mar/22 .....	89
[AMS-145] Stránkovanie API Created: 19/Feb/22 Updated: 10/Mar/22 Resolved: 10/Mar/22 .....	91
[AMS-144] Autentifikácia usera Created: 19/Feb/22 Updated: 24/Mar/22 Resolved: 24/Mar/22 .....	93
[AMS-143] Komunikácia medzi aplikačným serverom a user databázou Created: 19/Feb/22 Updated: 21/Mar/22 Resolved: 21/Mar/22 .....	94
[AMS-142] Základná user tabuľka v user databáze Created: 19/Feb/22 Updated: 17/Mar/22 Resolved: 17/Mar/22 .....	95
[AMS-141] Password management Created: 14/Feb/22 Updated: 19/Feb/22 Resolved: 19/Feb/22 .....	97

[AMS-140] Zabezpečenie endpointov cez HTTP basic auth Created: 14/Feb/22 Updated: 09/Mar/22 Resolved: 07/Mar/22 .....	98
[AMS-139] Verziovanie docker compose Created: 14/Feb/22 Updated: 24/Feb/22 Resolved: 24/Feb/22 .....	99
[AMS-133] Mapa domény na stránku tímu Created: 14/Feb/22 Updated: 24/Feb/22 Resolved: 24/Feb/22 .....	100
[AMS-132] MongoDB unit test Created: 07/Dec/21 Updated: 14/Dec/21 Resolved: 14/Dec/21 .....	101
[AMS-131] Testovanie dostupnosti kontajnerov Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21 .....	102
[AMS-130] Konfigurácia NGINX Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21 .....	103
[AMS-129] [RP] Exporty úloh Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21 .....	104
[AMS-128] [RP] Globálna retrospektíva Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21 .....	105
[AMS-127] [RP] Šprint č. 5 Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21 .....	106
[AMS-126] [RP] Metodika docker Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21 .....	107
[AMS-125] [RP] Metodika github actions Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21 .....	108
[AMS-124] [ID] Sekv. diagram celkového fungovania Created: 07/Dec/21 Updated: 08/Dec/21 Resolved: 08/Dec/21 .....	109
[AMS-123] [ID] Modul aplikačný server + testovanie Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21 .....	110
[AMS-122] [ID] Modul frontend + testovanie Created: 07/Dec/21 Updated: 15/Dec/21 Resolved: 15/Dec/21 .....	111
[AMS-121] [ID] Modul na indexovanie + testovanie Created: 07/Dec/21 Updated: 10/Dec/21 Resolved: 10/Dec/21 .....	112
[AMS-120] [ID] Modul API server + testovanie Created: 07/Dec/21 Updated: 14/Dec/21 Resolved: 14/Dec/21 .....	113
[AMS-119] [ID] Modul scraper + testovanie Created: 07/Dec/21 Updated: 13/Dec/21 Resolved: 13/Dec/21 .....	114
[AMS-118] Rozbehnúť PostgreSQL Created: 23/Nov/21 Updated: 28/Nov/21 Resolved: 28/Nov/21 .....	115
[AMS-117] Komunikácia medzi aplikačným serverom a API serverom Created: 23/Nov/21 Updated: 07/Dec/21 Resolved: 07/Dec/21 .....	116
[AMS-116] Komunikácia medzi API serverom a Elastic Search Created: 23/Nov/21 Updated: 06/Dec/21 Resolved: 06/Dec/21 .....	118

[AMS-115] Zobrazenie výsledkov vyhľadávania Created: 23/Nov/21 Updated: 05/Dec/21 Resolved: 05/Dec/21.....	119
[AMS-114] Komunikácia medzi MongoDB a API serverom Created: 23/Nov/21 Updated: 07/Dec/21 Resolved: 07/Dec/21.....	120
[AMS-113] Indexovanie stiahnutých dát Created: 23/Nov/21 Updated: 29/Nov/21 Resolved: 29/Nov/21.....	121
[AMS-111] Dokumentácia k riadeniu projektu Created: 23/Nov/21 Updated: 23/Nov/21 Resolved: 23/Nov/21.....	123
[AMS-110] Dokumentácia k inžinierskemu dielu Created: 23/Nov/21 Updated: 23/Nov/21 Resolved: 23/Nov/21.....	124
↳ [AMS-107] Vytvorenie articles db na virtualnej masine Created: 21/Nov/21 Updated: 21/Nov/21 Resolved: 21/Nov/21.....	125
↳ [AMS-106] Analyza shard, nodes Created: 16/Nov/21 Updated: 21/Nov/21 Resolved: 21/Nov/21.....	126
↳ [AMS-105] Analyza River plugin Created: 16/Nov/21 Updated: 16/Nov/21 Resolved: 16/Nov/21.....	127
[AMS-103] Rozšírenie docker compose o MongoDB a Elasticsearch Created: 15/Nov/21 Updated: 21/Nov/21 Resolved: 21/Nov/21.....	128
[AMS-102] Deployment scrapera Created: 15/Nov/21 Updated: 29/Nov/21 Resolved: 28/Nov/21.....	130
↳ [AMS-101] vytvorit komprimovanu collection z main.py a zmerat cas indexovania Created: 12/Nov/21 Updated: 16/Nov/21 Resolved: 16/Nov/21.....	132
↳ [AMS-100] Vytvorit config pre articles_index Created: 12/Nov/21 Updated: 12/Nov/21 Resolved: 12/Nov/21.....	133
↳ [AMS-99] Skonzultovat komentý v storke Created: 12/Nov/21 Updated: 15/Nov/21 Resolved: 15/Nov/21.....	134
↳ [AMS-98] Napísať dokumentáciu do README.md Created: 12/Nov/21 Updated: 16/Nov/21 Resolved: 16/Nov/21.....	135
↳ [AMS-97] Vytvorenie docker-compose file s MongoDB, Elasticsearch a Kibana Created: 12/Nov/21 Updated: 12/Nov/21 Resolved: 12/Nov/21.....	136
[AMS-95] Implementácia dummy Flask API Created: 09/Nov/21 Updated: 15/Nov/21 Resolved: 15/Nov/21.....	137
[AMS-94] Návrh Flask API Created: 09/Nov/21 Updated: 26/Feb/22 Resolved: 15/Nov/21.....	138
[AMS-93] Analýza možností implementácie testovania Created: 09/Nov/21 Updated: 23/Nov/21 Resolved: 23/Nov/21.....	146
[AMS-92] Zabezpečenie komunikácie medzi klientom a serverom Created: 09/Nov/21 Updated: 23/Nov/21 Resolved: 23/Nov/21.....	149

[AMS-91] Úprava dokumentácie zo stretnutí a šprintov tak, aby mohli ísť na stránku tímu Created: 09/Nov/21 Updated: 23/Nov/21 Resolved: 23/Nov/21 .....	150
[AMS-90] Integrácia MongoDB a Elasticsearch Created: 09/Nov/21 Updated: 16/Nov/21 Resolved: 16/Nov/21.....	151
[AMS-89] Integrácia scraperu a vylepšeného parseru Created: 09/Nov/21 Updated: 23/Nov/21 Resolved: 22/Nov/21.....	153
[AMS-88] Rozšíriť úložisko pomocou nepriradeného disku Created: 09/Nov/21 Updated: 23/Nov/21 Resolved: 14/Nov/21.....	155
[AMS-87] Zabrániť zacykleným buildom Created: 07/Nov/21 Updated: 22/Nov/21 Resolved: 15/Nov/21.....	156
↳[AMS-74] Sekvenčné scrapovanie Created: 02/Nov/21 Updated: 08/Nov/21 Resolved: 06/Nov/21.....	157
[AMS-73] Vyhľadanie RSS dvojčat'a k HTML článku - všeobecný postup Created: 02/Nov/21 Updated: 23/Nov/21 Resolved: 09/Nov/21.....	159
[AMS-72] Technický návrh developerského prostredia Created: 02/Nov/21 Updated: 25/Feb/22 Resolved: 24/Feb/22 .....	160
[AMS-71] Napĺňanie MongoDB priamo pri scrapovaní Created: 02/Nov/21 Updated: 23/Nov/21 Resolved: 14/Nov/21.....	161
[AMS-70] Rozšírenie google news scrapperu na lokáciu UK Created: 02/Nov/21 Updated: 02/Nov/21 Resolved: 02/Nov/21.....	162
↳[AMS-66] Ako mongoDB pracuje s vopred komprimovaným textom Created: 01/Nov/21 Updated: 01/Nov/21 Resolved: 01/Nov/21.....	163
↳[AMS-65] vyskusat nad datach Created: 01/Nov/21 Updated: 01/Nov/21 Resolved: 01/Nov/21.....	164
↳[AMS-64] realne kniznice Created: 01/Nov/21 Updated: 01/Nov/21 Resolved: 01/Nov/21.....	166
↳[AMS-63] elastic search a komprimacia Created: 01/Nov/21 Updated: 01/Nov/21 Resolved: 01/Nov/21.....	167
↳[AMS-62] analyza vyhladavania nad komprimovaným textom Created: 01/Nov/21 Updated: 01/Nov/21 Resolved: 01/Nov/21.....	168
↳[AMS-61] bezstratova kompresia text Created: 01/Nov/21 Updated: 01/Nov/21 Resolved: 01/Nov/21.....	169
[AMS-60] Pamäťová zložitosť elastic search na vzorke dát Created: 01/Nov/21 Updated: 12/Nov/21 Resolved: 12/Nov/21.....	170
[AMS-59] Parsovanie tagov pomocou lxml, readability, trafiletura Created: 30/Oct/21 Updated: 09/Nov/21 Resolved: 09/Nov/21 .....	172
[AMS-57] Zavesenie klienta Created: 27/Oct/21 Updated: 07/Nov/21 Resolved: 07/Nov/21 .....	175

↳[AMS-56] NGINX konfigurácia Created: 27/Oct/21 Updated: 31/Oct/21 Resolved: 31/Oct/21 .....	176
↳[AMS-55] Kontajner Express server Created: 27/Oct/21 Updated: 31/Oct/21 Resolved: 31/Oct/21 .....	177
↳[AMS-54] Kontajner Flask API Created: 27/Oct/21 Updated: 30/Oct/21 Resolved: 30/Oct/21 .....	178
[AMS-53] Rozšíriť docker compose Created: 27/Oct/21 Updated: 31/Oct/21 Resolved: 31/Oct/21 .....	179
[AMS-51] Pridať info o projekte a opísať členov tímu Created: 27/Oct/21 Updated: 02/Nov/21 Resolved: 01/Nov/21 .....	181
[AMS-50] Request URL s odpoveďou inou ako 200 uložiť do súboru Created: 27/Oct/21 Updated: 23/Nov/21 Resolved: 01/Nov/21 .....	182
[AMS-49] Lokálna MongoDB so získanými dátami Created: 27/Oct/21 Updated: 23/Nov/21 Resolved: 01/Nov/21 .....	183
[AMS-48] Analýza bezstratovej kompresie textu Created: 27/Oct/21 Updated: 01/Nov/21 Resolved: 01/Nov/21 .....	186
[AMS-47] Parsovanie tagov pomocou regex Created: 27/Oct/21 Updated: 02/Nov/21 Resolved: 02/Nov/21 .....	188
[AMS-46] Parsovanie tagov pomocou CSS Selector Created: 27/Oct/21 Updated: 08/Nov/21 Resolved: 08/Nov/21 .....	189
[AMS-44] Stránka tímu Created: 18/Oct/21 Updated: 22/Nov/21 Resolved: 01/Nov/21 .....	191
[AMS-43] Otvorenie portov na serveri Created: 18/Oct/21 Updated: 22/Nov/21 Resolved: 18/Oct/21 .....	192
[AMS-39] Vyriešiť, aby fiitkar nemohol urobiť "sudo su" na virtuálnom stroji (aby nemal šancu sa zmeniť na roota) Created: 13/Oct/21 Updated: 22/Nov/21 Resolved: 19/Oct/21	193
[AMS-35] Prieskum databáz Created: 13/Oct/21 Updated: 22/Nov/21 Resolved: 18/Oct/21 .....	194
[AMS-34] Vytvoriť github projekt Created: 13/Oct/21 Updated: 22/Nov/21 Resolved: 18/Oct/21 .....	195
[AMS-32] Prihláška na TP CUP Created: 13/Oct/21 Updated: 02/Nov/21 Resolved: 02/Nov/21 .....	196
[AMS-31] Set up elastic search v docker container Created: 13/Oct/21 Updated: 22/Nov/21 Resolved: 16/Oct/21 .....	197
↳[AMS-30] Redukcia a kategorizácia zoznamu zločinov Created: 13/Oct/21 Updated: 23/Nov/21 Resolved: 23/Nov/21 .....	199
[AMS-29] Získanie dát pre prototyp Created: 13/Oct/21 Updated: 23/Nov/21 Resolved: 26/Oct/21 .....	200
[AMS-21] Vytvoriť Slack server Created: 05/Oct/21 Updated: 22/Nov/21 Resolved: 11/Oct/21 .....	202

[AMS-20] Analyza parametrov Google News Created: 05/Oct/21 Updated: 22/Nov/21 Resolved: 13/Oct/21 .....	203
↳ [AMS-17] API / scrapovanie Created: 05/Oct/21 Updated: 10/Oct/21 Resolved: 10/Oct/21 .....	204
↳ [AMS-16] Ziskanie vzorky RSS Created: 05/Oct/21 Updated: 08/Oct/21 Resolved: 08/Oct/21 .....	205
[AMS-15] Realny scrapping - vytvorenie vzorky Created: 05/Oct/21 Updated: 22/Nov/21 Resolved: 10/Oct/21 .....	207
[AMS-13] Zistit, ktore miestnosti su na karticky Created: 05/Oct/21 Updated: 22/Nov/21 Resolved: 18/Oct/21 .....	208
[AMS-11] Lofi pouzivatel'skeho rozhrania - main page Created: 05/Oct/21 Updated: 20/Feb/22 Resolved: 20/Feb/22 .....	209
[AMS-10] Revizia poziadaviek Created: 05/Oct/21 Updated: 22/Nov/21 Resolved: 13/Oct/21 .....	210
[AMS-9] Spísať denník z prvého stretnutia s vedúcim Created: 03/Oct/21 Updated: 22/Nov/21 Resolved: 05/Oct/21 .....	211
[AMS-8] Pripady pouzitia Created: 01/Oct/21 Updated: 22/Nov/21 Resolved: 05/Oct/21 .....	212
[AMS-7] Prieskum ziskavania dat, praca s kniznicou Created: 01/Oct/21 Updated: 23/Nov/21 Resolved: 05/Oct/21 .....	213
[AMS-6] Specifikacia poziadaviek Created: 01/Oct/21 Updated: 22/Nov/21 Resolved: 03/Oct/21 .....	214
[AMS-5] Vysoka architektura Created: 01/Oct/21 Updated: 22/Nov/21 Resolved: 03/Oct/21 .....	215
[AMS-4] Zaobstarat stroj v škole Created: 01/Oct/21 Updated: 22/Nov/21 Resolved: 13/Oct/21 .....	216
[AMS-3] Zoznam trestnych cinov, ktore budu pouzite ako queries na google news Created: 01/Oct/21 Updated: 22/Nov/21 Resolved: 04/Oct/21 .....	217
[AMS-184] Implementovat' spôsob pamätania si usera Created: 10/Mar/22 Updated: 24/Mar/22 .....	218

# TO DO

Comment by [Adam Šípka](#) [ 23/Nov/21 ]

Google Translate API je spoplatnené od istého množstva preložených znakov, avšak existujú aj varianty, ktoré sú zadarmo a majú dostatočnú podporu jazykov (t. j. všetky, alebo väčšina jazykov štátov Európskej únie)

Väčšina iných zdrojov je buď obmedzená na určitý počet requestov za deň, alebo je poplatnená. Prípadne sa jedná o príliš špecifické zdroje, ako napríklad New York Times, čiže by sme mali jednostranne zamerané dáta.

### Description

Z aplikačného serveru príde request s novým parametrom keywords=[a, b, ...] a treba vytvoriť nový request na MongoDB, ktorý vráti iba články, ktoré tieto slová obsahujú.

flask dostane anglicke keywords a flask vráti clanky s ang keyword, jedine, co sa meni, je region.

Cize napr. clanok zo spanielska s anglickymi keywords

### Description

Ako súčasť pipeline. Hľadať z toho setu keywords, z ktorého jazyka je článok.

### Comments

Comment by [Jakub Hlavačka](#) [ 13/Mar/22 ]

Otázky:

- Co s viac jazyčným scrapovaním?
- Ukladať keywords iba v ENG?
- Budem musieť všetko na lower case, aby to matchlo...

Comment by [Jakub Hlavačka](#) [ 13/Mar/22 ]

For more images please see the album. The file has been moved, renamed or deleted. Your account may not be authorized to view the original content.

[Flashtext](#) je knižnica, ktorá rýchlo vyhľadáva alebo replacuje list reťazcov v texte. Ale na prvomobrazku je vidieť termov na vyhľadavanie/replacovanie okolo 500 (My máme 100 termov).

No a na záver [tu](#) vidím, že jednoduche “in” v pythone je rýchlejšie ako regex.

Comment by [Jakub Hlavačka](#) [ 15/Mar/22 ]

Otázky na stretnutie vol.2:

- Ukladať keywords v ENG?
- Ako chceme robiť continuous monitoring (to sa do scraperu asi nezmestí asi na tu bude potrebné novú službu aj na indexovanie...)?

Navrh na storku:

- Spraviť poriadne logovanie pre celý proces od scrapnutia po zaindexovanie (keď sa niečo pokáži, tak logy rozdelené pre pokážené indexovanie a pokážené uloženie do db)
- Vyriešiť, prečo píše logy z elasticu namiesto klasických logov zo scrapy

Comment by [Jakub Hlavačka](#) [ 15/Mar/22 ]

© 2012-2022 Elastic, Inc. All rights reserved. Elastic is a registered trademark of Elastic, Inc. in the United States and other countries.

Rucne som prezrel asi 5 clankov, ci naozaj obsahuju keywords, ktore nasiel scraper a sedelo to.

Comment by [Jakub Hlavačka](#) [ 18/Mar/22 ]

Elastic:

MongoDB:

Ulozime keywords aj v jazyku, podla ktoreho sa clanky scrapovali (mozne testovanie, lepsie overenie spravnosti)

**Warning:** region moze byt prazdny, pretoze pre niektore krajiny existuju **locale** dopyty iba podla jazyka bez reg sa bude **vyhladavat nad elasticom**, tak je potrebne to brat do uvahy a namiesto **regionu** vtedy pouzit **language**)

Comment by [Jakub Hlavačka](#) [ 18/Mar/22 ]

TODO:

- este zmenit type of keywords in elasticsearch configuration
- update readme scraper

### Comments

Comment by [Jakub Hlavačka](#) [ 03/Mar/22 ]

V buducnosti by sa mohlo zrusit reverse proxy na MongoDB a Postgres na produkcii. Pretoze sa do databazy pripaja cez ssh tunneling, tym padom by to malo fungovat bez toho

Comment by [Jakub Hlavačka](#) [ 03/Mar/22 ]

Neskor zabezpecit, aby sa data tahali iba na prvý docker-compose up.

- NGINX

#### Comments

Comment by [Dominik Horvath](#) [ 26/Feb/22 ]

premenne prostredia boli presunute do externych konfiguracnych suborov. Bol vytvoreny specialny subor s premennymi suvisiacimi s pripojenim akehokolvek servicu na mongoDB. Tento file by mal pouzít akykolvek service pracujuci s mongoDB, aby sme mohli upraviť udaje suvisiace s databazou na jednom mieste naraz pre všetky služby.

Podobny opstup by mal byt pouzity aj pri elasticu aj pri postgresQL databaze. Subory obsahujuce parametre databazy a podobnych sluzieb by mali byt pomenovane ako <MENO>\_connection.env

Za tymto ucelom bolo doposial vytvorene **elastic\_connection.env** a **mongo\_connection.env**

Comment by [Dominik Horvath](#) [ 27/Feb/22 ]

Prva verzia dev prostredia je hotova, dokumentacia je dostupna na [https://github.com/FIIT-TEAM8/dev\\_environment](https://github.com/FIIT-TEAM8/dev_environment)

### Comments

Comment by [David Silady](#) [ 04/Mar/22 ]

Found in branch: *basic\_router*

Comment by [David Silady](#) [ 04/Mar/22 ]

Je tam aj zopár fixov na backende.

Comment by [David Silady](#) [ 04/Mar/22 ]

Hlavná časť je v:

App.jsx (router - je nested)

index.js (router wrapper - tam sa určuje podľa env premennej, že aka je home)

TitleSearch.jsx (pridaný Outlet pre router [tam, kde je outlet sa vyrenderuje child routa], tiež upravená logika pre

SearchResults.jsx (presunutý apiCall, niekoľko častí zakomentovaných, pretože hlavne paging nefunguje a chybné vyhľadávanie query parametrov)

Comment by [David Silady](#) [ 04/Mar/22 ]

Comment by [David Silady](#) [ 04/Mar/22 ]

Zakladna route teraz presmeruje na /search, kde sa nachadza komponent <TitleSearch/>

Po vyhladani sa presmeruje na /search/results, cim sa pod <TitleSearch/> na mieste <Outlet/> vyrenderuje <SearchResults/> potom na zaklade parametrov vykona vyhladanie.

Navigácia v react-router@6 sa používa primárne pomocou:

`<Navigate/>`  
`useNavigate()`

`<Route/>`

Cesty sa používajú aj relatívne.

Takže ak v TitleSearch (route: `/search`) použijem `navigate('results')`, prejdem do `/search/results`

Strom aktuálnych routov:

- `/`
- `/search`
  - `/results`
- `/example`

Comment by [Táňa Poláková](#) [ 11/Mar/22 ]

Router je implementovaný veľmi elegantne, prakticky a je jednoducho rozšíriteľný.

### Description

nlTK python knižnica

chceme vidieť pekný výsledok

na 100 článkov

skúsiť viac jazykov

niektoré jazyky aj ručne

### Comments

Comment by [Jakub Müller](#) [ 09/Mar/22 ]

Named entity recognition bolo testované na 50-tich článkoch, ktoré boli získané z našej databázy. Na identifikovanie požadovaných entít bola použitá knižnica NLTK, ktorá identifikuje

entity ako: osoba, lokácia, organizácia a pod. Bol vytvorený jednoduchý skript, ktorý identifikuje všetky typy menných entít v testovacích článkoch. Výsledok rozpoznávania entít bol vyhodnocovaný ručne a výsledky sú uvedené v prílohe **ner\_eval.xlsx**. Daných 50 článkov dokázal skript spracovať za cca 17 sekúnd a je uvedený v prílohe **ner\_testing.py**.

Comment by [Táňa Poláková](#) [ 11/Mar/22 ]

Storka bola pekne spracovaná, dozvedeli sme sa, akú úspešnosť má knižnica nltk.

#### Comments

Comment by [Táňa Poláková](#) [ 04/Mar/22 ]

Namiesto pôvodnej odporúčanej knižnice som použila <https://formik.org/docs/overview> , keďže zaručila jednoduchšiu úpravu a jednoduchšie validation handleovanie jednotlivých komponentov v rámci tagu form.

Momentálne je hotová obrazovka prihlásenia a je potrebné dorobiť komunikáciu s aplikačným serverom, ako aj vymyslieť preklik na túto obrazovku z aktuálne dostupných obrazoviek.

Comment by [David Silady](#) [ 04/Mar/22 ]

Knižnica môže byť, ale myslím, že úprava cez json by bola stále jednoduchšia, pokiaľ by sa spravil wrapper na RJSF (ja som to v minulosti robil takto nejak <https://github.com/DavidSilady/sitecreator/blob/master/src/Components/JsonSchemaWrapper.js> a šlo to docela fajn). Ale Formik vyzerá tiež dosť powerful a šikovne.

Výzorovo super.

Kód ale asi nie je na githube - neviem ho nájsť. (btw vytvoril som dnes nanovo branch pre sprint6, tak potom by som to mergoval tam a na konci sprintu sa to mergne to mainu)

### Comments

Comment by [Jakub Hlavačka](#) [ 07/Mar/22 ]

Keď modul scraper uloží článok do MongoDB, tak následne pošle request Elasticu, aby ho zaindexoval.

Funguje to cez database.py nie cez Scrapy pipelines (keď tak prerobit)

TODO pred review:

- napísať dokumentáciu
- pridať env v produkčnej masíne
- zistiť, prečo Scraper vypisuje logy z elasticsearch a nie tie naše

Comment by [Jakub Hlavačka](#) [ 08/Mar/22 ]

samotný text field v elastic nie je uložený, ale zistil som, že sa v source automaticky jeho hodnota uklada.

Na linku su popisane nevyhody, ked text field v source prestaneme ukladat.

<https://www.elastic.co/guide/en/elasticsearch/reference/current/mapping-source-field.html>

Comment by [Jakub Hlavačka](#) [ 08/Mar/22 ]

Ukladaju sa uz clanky do ams\_db v MongoDB alebo stale do admin ?

MongoDB vytvori databazu az ked su v nej nejake data, nie je potrebne pripravit infrastrukturu dopredu, bude stacit zdrojove kody v komponentoch, ktore s databazou pracuju.

Comment by [Dominik Horvath](#) [ 06/Mar/22 ]

Custom image pre mongoDB bol vytvoreny + pushnuty na docker-hub <https://hub.docker.com/r/fiitteam8/mongo>

Implementované dva unit testy, jeden testuje, či sa z kolekcie articles vráti správny dokument, druhý testuje, či sa z kolekcie crimemaps vracajú správne kľúčové slová.

#### Description

Zabezpečiť komunikáciu medzi Aplikačným containerom a Flask API (data) containerom, aby aplikačný container dokázal spracovať, ukladať, hľadané requesty vzhľadom na užívateľa (napr. história vyhľadávania)

#### Comments

Comment by [David Silady](#) [ 07/Dec/21 ]

#### Zabezpečená komunikácia medzi aplikačným serverom (ExpressJS) a data API serverom (Flask)

V DEV prostredí sa zatiaľ odkazuje na produkčnú data API:

<https://team08-21.studenti.fiit.stuba.sk/api/v2>

V PROD prostredí (už je možná komunikácia v rámci docker containerov):

[http://flask\\_server:5000/v2](http://flask_server:5000/v2)

### **Implementovaná základná funkcionálna pre endpoint:**

`/ams/api/data/search/?q=""`

Aktuálne posunie request (všetky query parametre) na

```
{{  
  
{flask_api_host}  
  
/v2/search/  
  
{query_params}  
  
}}
```

Výsledok následne posunie ako response clientovi.

*Poznámka:*

Možno bude nutné premenovanie NGINX routes k aplikačnému webu a k data API. V aktuálnom stave to dokáže byť celkom mäťúce.

Comment by [Jakub Müller](#) [ 06/Dec/21 ]

Bola zabezpečená komunikácia medzi API serverom a Elasticsearchom. Táto komunikácia prebieha tak, že po zadaní dopytu API server nadviaže komunikáciu s Elasticsearchom a pošle mu daný dopyt. Následne Elasticsearch vráti serveru "hity", kde sú uvedené ID-čka dokumentov obsahujúcich hľadaný výraz. Keďže response z Elasticsearchu je vo formáte JSON, tak musia byť ID-čka vyextrahované. Následne sú tieto ID-čka použité na získanie samotných článkov z MongoDB.

Na frontende sa zobrazujú výsledky vyhľadávania vo forme: dátum publikovania, link, názov článku a kľúčové slová. Prvé tri vety článku sa zatiaľ nezobrazujú, keďže k tomu je potrebná implementácia na backende.

Mohli by sme pouvažovať na upravení formy dátumu tak, aby som na frontende nemusela riešiť orezávanie a rovnako by sme mohli skúsiť extrahovať z linku iba odkaz na doménu, pričom preklik by ostal pôvodný.

Komunikácia medzi MongoDB a API serverom bola zabezpečená. ID hodnoty dokumentov získaných z Elasticu sú použité pri vyhľadávaní v databáze a pre každé z nich nám Mongo vráti celý dokument. Pre ten ešte nájdeme kľúčové slová v kolekcii crimemaps a tie priložíme k danému dokumentu. Výsledné články sú poslané ako response vo formáte JSON na NodeJS server.

Github actions nepodporuje deploy ale iba build. Pretoze by bolo zbytocne zakazdym indexovat.

Zakomentoval som tento kontajner v produknej verzii, pretoze by sa pri kazdom docker-compose up indexoval

River plugin a Mongo connector su deprecated pre MongoDB v.4 a Elasticsearch v.7 . Myslim si, ze bude najvhodnejsie pouzit logstash, kedze to je sucast balika elastic.

Zistit ako funguje logstash.

Comment by [Jakub Hlavačka](#) [ 21/Nov/21 ]

<https://www.elastic.co/elasticon/conf/2016/sf/quantitative-cluster-sizing> - Tu pisu, ze je vhodne otestovat na zaindexovanych datach scenare zistit, ze kedy jednotlivé shardy pomáhajú a kedy nie... Shary môžu zahliť CPU, pretože vyhľadávanie v každom sharde funguje na samotnom CPU vlakne.

<https://www.elastic.co/guide/en/elasticsearch/reference/current/size-your-shards.html#shard-size-recommendation> - Tu spominaju, ze by sme sa mali snazit drzat velkost jedneho shardu medzi 10GB az 50GB

<https://www.elastic.co/guide/en/elasticsearch/reference/current/size-your-shards.html#shard-count-recommendation> - Tu sa spomina, ze ak jeden node prekroci 20 shardov pre 1GB heap memory, tak sa ma pridat dalsi node

<https://discuss.elastic.co/t/how-many-nodes-should-an-elasticsearch-cluster-have/227674> - Tu opisuju, ze kolko nodov by mal mat cluster a vetu each node is one host (either physical or virtual) som pochopil tak, ze mi budeme mat jeden node.

**Vysledok:** Cluster ma jeden node, jeden shard a jednu repliku

Navrh na dalsi task <https://www.elastic.co/guide/en/elasticsearch/reference/current/size-your-shards.html#use-ds-ilm-for-time-series> - Zistit nieco o elastic ILM, pretoze pouzivame time series data a zjavne sa to hodi.

Dalsi task zistit, ci sa nam hodi logstash na updateovanie elasticsearch vzdy, ked pride novy zaznam do mognodb zo scrapera. Ak ano, tak ho pouzit.

#### Description

+ systémové premenné na ovládanie kontajnera

Spustenie scrapera na posledné dva týždne (zatiaľ) z UK.

#### Comments

Comment by [Dominik Horvath](#) [ 28/Nov/21 ]

parser bol upraveny na konfiguraciu pomocou argumentov. Deploy bol vyrieseny pomocou scrapyd modulu. Tento modul vytvori jednoduchy HTTP API server nad nasim crawlerom. Cela aplikacia je dockerizovana a bezi na virtualnom stroji timu.

Ovladanie je teda prostrednictvom HTTP API, momentalne pouzitelne len priamo z virtualneho stroja - NGNINX konfiguracia z nejakeho dovodu zabranuje POST requestom z externych sieti. Toto je praca do dalsej story.

Priklad ovladania:

Po prihlaseni na virtualny stroj je mozne spustit nas crawler nasledovnym sposobom:

```
curl localhost:6800/schedule.json -d spider=news_spider -d project=ams -d  
search_from=2021-11-14 -d search_to=2021-11-28 -d locale=en-gb -d  
crimes_file=list_of_crimes.txt
```

Toto spusti crawlovanie dat v danom casovom rozpati so specifikovanim suborom zlocinov.

Cely kod je k dispozicii na [githube](#).

Poznamka: v README na githube su argumenty posielane pomocou **-a** prepinača a pri vzorke kodu v tomto komentari je pouzity **-d** prepinač. Nie je to chyba, **-d** pri curl-e iba posielala POST data a samotny server ich automaticky potom prechodi na **-a**. Cize pri lokalnom developmente, ked scrapy nebezi na serveri, pouzivat **-a** argumenty a sposob specifikovany v README.

Versioning: robi sa kvoli supportu starsich zakaznikov v pripade, ze sa nejake poziadavky zmenia a my spravime

Existuju 4 strategie versioningu:

1. URI path versioning - /api/v1/Customers/1 ... /api/v2/Customers/1

2. URL parameter versioning - /api/Categories?v=1.1
3. Content Negotiation - URLs sa nemenia, v accept header vidime, ktora verzia je ta, ktoru chceme:
  1. Accept: application/app.v1.categories
  2. Accept: application/app.v2.categories
4. Custom Header:
  1. x-App-version: 1.3
  2. x-App-version: 2017-08-12

Continuous versioning - neexistuju ziadne verzie, iba json responses vzdy nejak prisposobime, aby obsahovalo p...  
sme pridali na zaklade zmenenych poziadaviek (viac: <https://www.youtube.com/watch?v=M2KCuo0q3JE> ).

Comment by [Táňa Poláková](#) [ 14/Nov/21 ]

Dokumentáciu je vhodné písať/generovať, až keď sú requesty implementované.

## Postman

### Vyhody

- intuitívne grafické rozhranie dostupné aj cez prehliadač
- podpora kolaborácie
- testovanie API

### Nevyhody

- výsledná dokumentácia je dostupná cez postman URL a nie cez našu vlastnú - to sa dá len pri PRO verzii
- response json sa neda dokumentovať

### Ukazka dokumentacie

## Ako funguje

1. nainstalujeme si Postman (<https://www.postman.com/downloads/> )
2. do timoveho workspace sa vieme dostat cez invite link dostupny na nasom drive
3. vytvorime si collection, kam budu spadat nase implementovane requesty, mozeme vytvorit aj viac kolekci
4. nasa Collection je vlastne subor nasich requestov, ktoru vieme ako celok zdokumentovat - vieme jej dat name  
Collections - nam asi bude stacit len Collection "Articles"
5. v ramci kolekcie si vytvorime vsetky implementovane requesty - rozdelené aj podla metod
6. pri kazdom requeste vieme pridat description, query parametre, ulozit, ako vyzera priklad json response

## Flask-RESTPlus

Rozsirenie pre Flask, dostupne cez pip: pip install flask-restplus

<https://www.imaginarycloud.com/blog/flask-python/>

## Vyhody

- vacsinu si naprogramujeme sami
- dokumentacia moze byt na nasej domene
- kolaboracia je mozna vlastne len tak, ze pristupujeme k spolocnemu kodu
- response json sa da dokumentovat

## Nevyhody

- vacsinu si naprogramujeme sami
- nie je graficke rozhranie
- vysledny vzhľad dokumentacie sa mi nepaci (😞)
- testujeme iba cez konzolu

## Ukazka kodu

Ukazka dokumentacie

Typy testovania:

1. Functional Testing
2. Usability testing - zatiaľ netreba
3. Interface testing
4. Compatibility testing - zatiaľ netreba
5. Performance testing - zatiaľ asi netreba
6. Security testing - zatiaľ asi netreba

#### **Functional Testing**

Toto testovanie kontroluje UI, API, databázu, bezpečnosť, klient/server komunikáciu a fungovanie aplikácie.

#### ***a) Unit testing***

Účelom je otestovať každú funkciu poskytnutím vhodného vstupu a overením výstupu vzhľadom na funkčné požiadavky. Testujeme malé časti softvéru, vykonáva sa ako prvé Frameworky na testovanie Node.js aplikácií:

- Mocha
- Jest
- Chai
- Jasmine
- AVA
- Pre Python:
- unittest + Nose2 a Testify (optional)
- PyTest
- DocTest

Ako písať ľahko testovateľný kód:

- deterministické funkcie: výstupná hodnota závisí od vstupnej a nie od skrytých premenných v danej funkcii
- Inversion of Control technika: oddeliť decision making kód (kedy a za akých podmienok sa niečo vykoná) a action kód (čo sa za vykoná)
- Dependency Injection: Objekt (client) prijíma ďalšie objekty (services/dependencies) od ktorých je závislý. Kód kde je service vložený (injector) určí clientovi, akú službu bude používať, namiesto toho, aby si to client určil sám.

```
public class SmartHomeController
{
    private readonly IDateTimeProvider _dateTimeProvider; // Dependency

    public SmartHomeController(IDateTimeProvider dateTimeProvider)
    {
        // Inject required dependency in the constructor.
        _dateTimeProvider = dateTimeProvider;
    }

    public void ActuateLights(bool motionDetected)
    {
        // Delegating the responsibility
        DateTime time = _dateTimeProvider.GetDateTime();

        ...
    }
}
```

### ***b) Integration testing***

Jednotlivé moduly sú skombinované a otestované ako celok. Zamerané na presun dát medzi modulmi.

Ak medzi niektorými už existuje prepojenie/funkcionalita a ostatné nie sú hotové, môžeme

existovať existujúce. Cieľom je odhaliť chyby v interakciách medzi modulmi, keďže tie sú zväčša písané rozdielnymi ľuďmi.

### Description

Je potrebné vylepšiť parser z predošlého šprintu (konkrétne z tasku “Parsovanie tagov pomocou CSS Selector”) a integrovať ho do nášho scraperu.

### Comments

Comment by [Jakub Müller](#) [ 23/Nov/21 ]

Parser bol integrovaný bez nejakých problémov, keďže bol vytvorený pomocou knižnice Scrapy, ktorá je použitá aj pri samotnom scraperi.

Comment by [Jakub Müller](#) [ 23/Nov/21 ]

Vylepšenie parseru sa týkalo odstránenia nepotrebných dát z tagov paragrafov a headingov, ktoré boli vyselektované pomocou XPATH selektora. Tieto nepotrebné dáta predstavovali atribúty daných tagov (teda napríklad classy, ID-čka a rôzne iné špecifikácie), ktoré nepotrebujeme, pretože nijako neovplyvňujú formu nášho výsledného HTML súboru.

Comment by [Jakub Müller](#) [ 23/Nov/21 ]

Na odstránenie týchto atribútov bolo vyskúšaných viacero spôsobov. Bolo skúmané, či sa nedajú jednoducho odignorovať už pri samotnom selektovaní tagov pomocou **XPATH** selektora. Toto sa ukázalo ako nemožné. Následne bolo skúšané odstraňovanie atribútov pomocou **regex**-ov a aj pomocou **listových operácií** v Pythone.

Nakoniec sa ukázalo, že riešenie pomocou listových operácií bolo najlepšie. Následne sa tiež kontrolovalo, či daný tag má vôbec nejaký obsah a ak nie, tak sa celý odstránil.

Comment by [Jakub Müller](#) [ 23/Nov/21 ]

Toto riešenie bolo testované na rovnakom súbore ako pôvodný parser (1\_articles.jl, ktorý mal veľkosť približne 3,5GB). Pôvodný parser dokázal zredukovať daný súbor o cca **92%** a vylepšený parser ho dokázal zredukovať o **93%**, teda o približne 1% viac, pričom sa nestratili žiadne potrebné informácie z daných HTML súborov. Tento vylepšený parser taktiež dokázal spracovať tieto články v približne rovnakom čase ako pôvodný a to za cca **3 minúty**.

Detailné výsledky testovania vylepšeného parseru sú uvedené v prílohe **improved\_parser\_mearments.txt**

Sekvenčne scrapovanie bolo skusane pomocou viacerých prístupov, a to BeautifulSoup knižnica, LXML knižnica spolu s [ XPATH |<https://www.w3.org/TR/1999/REC-xpath-19991116/>]selector standardom a taktiež [python-fork reader-view](#) pluginu obsiahnutom v prehliadaci firefox.

BeautifulSoup knižnica nebola dostacujuca. Na jednu stranu bola velmi pomala + vyzadovala zlozity kod na extrahovanie len tych atributov, ktore su pre nas zaujimave.

Fork readerview pluginu fungoval perfektne, jeho vytvorene vzorky fungovali 99% pripadov tak ako v prehliadaci, avsak bol velmi pomaly - datovu sadu 1\_articles.zip spracovaval asi 4 hodiny, kde sa nedostal ani do polovice clankov. Nasledne som program vypol.

LXML knižnica spolu s XPATH selectorom fungovala najlepsie. Bola vytvorena tato vyhľadavacia query:

```
"//p | //h1 | //h2 | //h3 | //h4 | //h5 | //h6"
```

ktora zoberie vsetky stanovene HTML tagy v povodnom poradi, ako boli v dokumente. Kniznica bola velmi rychla a redukcia dat signifikatna (priloha timing.txt)

V prilohu **data.zip** sa nachadza spracovanych prvych 100 zaznamov z datovej sady 1\_articles.zip a taktiez zdrojovy kod. V priecku **parsed** sa nachadza 100 HTML suborov, jeden pre kazdu spracovanu stranku. V subore **articles\_sample\_links.txt** sa pre moznost kontroly nachadzaju odkazy na povodne clanky. HTML subory maju v nazve cislo riadku, na ktorom sa v subore **articles\_sample\_links.txt** nachadza odkaz k povodnemu clanku.

Bohužial, nič v podobnej sfere v dnešnej dobe neexistuje. Existujúce citáky RSS streamov potrebujú priamy odkaz na stream konkrétneho webu, nedokážu získať stream URL len z "base" URL domény. Taktiež každý portál obsahuje vlastné štruktúry pre RSS stream URL, ich tvar nie je štandardizovaný.

V dnešnej dobe je taktiež náradne najštruktúrovaný RSS stream, čiže RSS stream obsahujúci aj telo samotného článku, nielen metadáta o nom. Vzhľadom na to, že väčšina RSS streamov obsahuje len odkaz na samotný článok, tento postup by nám neposkytol žiadnu výhodu oproti terajšiemu prístupu.

Je nutné vytvoriť inicializačné skripty pre DEV databázy s dummy dátami.

docker-compose má obmedzené scripting ability, ale je možné podľa prepínačov nastavovať systémové premenné

#### Aktuálny návrh:

Pri spustení docker-compose sa špecifikuje, na ktorom containeri sa bude robiť development, to si developer naclonuje k sebe manuálne.

Ostatné containery sa spustia so system variable DEV=true, kde v prípade, že sa v DEV prostredí majú správať inak ako v PROD (napr. databázy), vykonajú inú/upravenú verziu inicializácie.

Podarilo sa mi upraviť scraper tak, aby sa získané dáta hneď ukladali do Mongo databázy. Momentálne sa jedná len o lokálnu databázu umiestnenú na mojom osobnom zariadení. Nebude problém neskôr zmeniť, stačí v súbore settings.py upraviť nasledovné premenné (+ pridať heslo):

```
# db server and port (local for now)
MONGODB_SERVER = "localhost"
MONGODB_PORT = 27017
```

Databáza je tvorená z 3 kolekcií (articles, crimemaps a errorlinks). Okrem automatického indexu *\_id*, ktoré tvorí mongo automaticky, som v každej kolekcií nastavil field *link* na unikátny index, aby sa zabránilo duplikátom.

Scrapper je pripraveny na parsovanie clankov z lokacie UK, v jazyku anglictina. Staci inicializovat triedu na parsovanie takto:

```
gnews_parser = GnewsParser()  
gnews_parser.setup_search("covid", '2021-09-01', '2021-09-02', locale="en-  
gb")
```

MongoDB podporuje rovnaku kompresiu ako ZIP, pricom v mongoDB budu data v ramci jedneho zaznamu celistve, takze sme zvolili tento sposob.

MongoDB podporuje zstd, snappy, zlib a gzip

Zobrat dump od [Adam Šípka](#) a spravit index v elastic search, pricom jednotlivé values pre terms budu ID zo zaznamov v MongoDB

#### Comments

Comment by [Jakub Hlavačka](#) [ 07/Nov/21 ]

Neskôr by bolo vhodné použiť asi toto <https://hevodata.com/learn/integrating-elasticsearch-and-mongodb/>

Comment by [Jakub Hlavačka](#) [ 08/Nov/21 ]

Mam zatiaľ vytvorený docker-compose, kde je mongodb a elasticsearch s ich vlastnými volumes. Mongo ma col clanky z articles\_1.zip . K tasku prikladam script, pomocou ktoreho som cital z mongodb a snazil sa vytvarat in

Posting list sa mi zatiaľ nepodarilo naimplementovať, pretože elasticsearch analyzer ma obmedzenie pre tokeniz

Aby som aspon hrubým odhadom zistil pamäťovú zložitosť vytvoreného indexu v elasticsearch, tak som vkladal jeho kluc bola id z mongodb... Pricom po nejakom 650 clanku vybehol nasledovný error

Navrhujem dalsi postup:

- vyriesit problem s obmedzenim tokenizacie
- vytvarat uz rovno index (posting list), ktory budeme vyuzivat v AMS
- vytvorit dalsi task na analyzu nastroja z <https://hevodata.com/learn/integrating-elasticsearch-and-mongo>
- Alokovat viac casu !!!

EDIT: pridane navrhu na dalsi tak s nastrojom.

Comment by [Jakub Hlavačka](#) [ 12/Nov/21 ]

Z 308MB clankov spravil elasticsearch 244MB.

Comment by [Táňa Poláková](#) [ 07/Nov/21 ]

Readability - funguje iba na zaklade nazvov tagov a tried, nie na zaklade jazyka textu - funkcia summary() extrahuje hlavny obsah HTML stranky. Ako prve vymaze vsetky script alebo style tagy. Nasledne maze tagy na zaklade regexov:

```
{ {'unlikelyCandidatesRe':  
re.compile('combx|comment|community|disqus|extra|foot|header|menu|remark|rss|shoutbox|sidebar|sponsor|ad-  
break|agegate|pagination|pager|popup|tweet|twitter',re.I), 'okMaybeItsACandidateRe':  
re.compile('and|article|body|column|main|shadow',re.I),} }  
  
if (  
    REGEXES["unlikelyCandidatesRe"].search(s)
```

```
    and (not REGEXES["okMaybeItsACandidateRe"].search(s))
    and elem.tag not in ["html", "body"]
):
    log.debug("Removing unlikely candidate - %s" % describe(elem))
    elem.drop_tree()
```

Potom pridava score tagom na zaklade urcitych kriterii:

```
def class_weight(self, e):
    weight = 0
    for feature in [e.get("class", None), e.get("id", None)]:
        if feature:
            if REGEXES["negativeRe"].search(feature):
                weight -= 25

            if REGEXES["positiveRe"].search(feature):
                weight += 25

            if self.positive_keywords and self.positive_keywords.search(feature):
                weight += 25

            if self.negative_keywords and self.negative_keywords.search(feature):
                weight -= 25

    if self.positive_keywords and self.positive_keywords.match("tag-" + e.tag):
        weight += 25

    if self.negative_keywords and self.negative_keywords.match("tag-" + e.tag):
        weight -= 25

    return weight

def score_node(self, elem):
    content_score = self.class_weight(elem)
    name = elem.tag.lower()
    if name in ["div", "article"]:
        content_score += 5
    elif name in ["pre", "td", "blockquote"]:
        content_score += 3
    elif name in ["address", "ol", "ul", "dl", "dd", "dt", "li", "form", "aside"]:
        content_score -= 3
    elif name in [
        "h1",
        "h2",
        "h3",
        "h4",
        "h5",
        "h6",
        "th",
        "header",
        "footer",
        "nav",
    ]:
        content_score -= 5
    return {"content_score": content_score, "elem": elem}
```

Vyberie sa najlepsí kandidát na základe score a potom sa hľadajú susedné elementy, ktoré by s najlepším kandidátom mohli súvisieť.

Comment by [Táňa Poláková](#) [ 08/Nov/21 ]

Readability - pri 20tich článkoch nesedel jeden extrahovaný s pôvodným článkom. Extrahovaný hlavný obsah bol nezmysel - iba svg obrázky.

V kóde nemajú veľkú váhu headings, čo by bolo možné upraviť pre naše potreby. Všeobecne mi ale pride, že v kóde je bordel - veľa zakomentovaných vecí.

Comment by [Táňa Poláková](#) [ 08/Nov/21 ]

Trafilatura - všetkých 20 článkov obsahovalo hlavný content - aj ten, ktorý readability nezvládol. Zaujímavosťou bolo, že v kóde použili readability a na základe dĺžky extrahovaného textu sa rozhodli, či použijú svoj alebo readability algoritmus.

Rozdiel je, že trafilatura vracia iba holý text, bez tagov.

Comment by [Táňa Poláková](#) [ 08/Nov/21 ]

Readability funguje rovnako pre anglické aj slovenské články.

Príklad:

(zdroj: <https://www.cas.sk/clanok/2603841/brutalna-dvojnashobna-vrazda-v-lednickych-rovniach-kedy-sa-zacne-proces-s-obzalovanim/>)

[2 sk article.html](#)<sup>□</sup>

Trafilatura tiež.

Comment by [Dominik Horvath](#) [ 31/Oct/21 ]

Vytvorene 2 github repozitare: [node server](#) a [flask server](#). Oba repozitare obsahuju github actions procedury nakonfigurovane tak, aby sa spustili pri pushnuti / mergnuti do main branche.

Github actions vykonaju build kontajneru z aktualnej main branch, nahra hotovy image na docker-hub a nasledne nacita najnovsie docker image aj na timovy virtualny stroj, kde ich rovno spusti a nahradi stare kontajnery.

Nove cesty v nginx reverse proxy:

- /api => flask server
  - /ams => node server
-

### Description

Naše získané dáta (všetky fields) dať do lokálnej MongoDB, zistiť, aké sú možnosti práce s ňou, koľko miesta zaberá na disku - uvidíme, ako naše dáta Mongo zredukuje. Zistiť, ako je tvorené ID.

### Comments

Comment by [Adam Šípka](#) [ 23/Nov/21 ]

Veľkosť pôvodných dát: 28,3 GB (3,53 + 4,75 + 4,94 + 4,56 + 4,66 + 5,87)

Veľkosť databázy (bez extra kompresie): 9,028870144 GB

Veľkosť databázy (dodatočná kompresia): 5,791744000 GB

Počet záznamov: 228,774 (articles\_all)

Bez komprimovania (úplne basic databáza):

"db" : "articledata", meno databázy

"collections" : 1, počet kolekcií (niečo ako tabuľka v SQL databázach)

"views" : 0,

```
"objects" : 228774, počet všetkých dokumentov vo všetkých kolekciách
"avgObjSize" : 125179.16999746475, priemerná veľkosť 1 dokumentu
"dataSize" : 28637739437, veľkosť všetkých dokumentov (neskomprimovaných)
"storageSize" : 9025990656, priestor alokovaný všetkým kolekciám v databáze vrátane voľného miesta (bez indexov)
"freeStorageSize" : 2019328,
"indexes" : 1, počet indexov (1 automaticky vytvorený - niečo ako id, unikátny pre každý dokument)
"indexSize" : 2879488, priestor alokovaný pre indexy
"indexFreeStorageSize" : 163840,
"totalSize" : 9028870144, súčet indexSize a storageSize (veľkosť databázy)
"totalFreeStorageSize" : 2183168,
"scaleFactor" : 1,
"fsUsedSize" : 511983788032, využitá veľkosť disku kde mongo ukladá veci
"fsTotalSize" : 984432504832, celková veľkosť disku kde mongo ukladá veci
"ok" : 1
```

Databáza kde bola kolekcia vytvorená s dodatočnou kompresiou dát:

```
db.createCollection('collectionName', {storageEngine: {wiredTiger: {configString:
'block_compressor=zlib'}}})
"db" : "articlescompressed",
"collections" : 1,
"views" : 0,
"objects" : 228774,
"avgObjSize" : 125179.16999746475,
"dataSize" : 28637739437,
"storageSize" : 5788897280,
"freeStorageSize" : 1695744,
"indexes" : 1,
"indexSize" : 2846720,
"indexFreeStorageSize" : 118784,
"totalSize" : 5791744000,
"totalFreeStorageSize" : 1814528,
"scaleFactor" : 1,
"fsUsedSize" : 517487702016,
"fsTotalSize" : 984432504832,
"ok" : 1
```

vytvorenie databázy a kolekcie cez mongo shell (s extra kompresiou)

```
use dbName
```

```
db.createCollection('collectionName', {storageEngine: {wiredTiger: {configString:
'block_compressor=zlib'}}})
```

import dát cez command line

```
mongoimport --db dbName --collection collectionName --file fileName
```

Mongo vygeneruje unikátne id pre každý dokument sám, ale asi bude lepšie použiť url ako unikátne id, aby sme zabránili duplikátom. Alebo sa to vyrieši ešte pri scrapovaní dát, navštívené linky už nebudeme scrapovať.

### Description

Pomocou CSS Selector je potrebné vyskúšať parsovať tagy, ktoré obsahujú text

### Comments

Comment by [Jakub Müller](#) [ 08/Nov/21 ]

Pri analýze CSS selektora z knižnice *scrapy* sa ukázalo, že pre náš účel nebude dostačujúci. Je to z toho dôvodu, že tento selektor dokáže selektovať iba jednotlivé tagy zvlášť a my potrebujeme všetky tagy, ktoré obsahujú text (teda `<p>` a všetky `<h>` tagy) a v pôvodnom poradí.

Preto sme sa namiesto CSS selektora z knižnice *scrapy* zamerali na selektor *XPATH* z tejto knižnice.

Tento selektor dokáže vyselektovať všetky tagy s textom (teda paragrafy a headingy) v takom

poradí, v  
akom sú uvedené v pôvodnom HTML súbore.

Výsledný parser bol testovaný na vzorke dát 1\_articles.jl, ktorá má cca 3.7GB a obsahuje cca 27 000 článkov. Celú túto vzorku dát dokázal parser spracovať za necelé 3 minúty, pričom dokázal znížiť veľkosť výsledného súboru o cca 92%.

Detailnejšie výsledky parseru sú uvedené v prílohe **scrapy\_xpath\_measurments.txt** a príklad výsledného HTML súboru, z ktorého bol vyselektovaný iba text je v prílohe **example.html**

Comment by [Jakub Hlavačka](#) [ 16/Oct/21 ]

File attachments are not supported. You can only attach images and videos. You can also attach files up to 10 MB.

Pre spustenie je potrebne byt v adresari /home/fiitkar/docker-folder a odpalit command: *sudo docker-compose up*

Prepinac -d zabezpeci, ze sa proces spusti na pozadi.

Command na zastavenie a zmazanie docker kontajneru: *sudo docker-compose down*

**Nerobit:** *sudo docker-compose down -v* , pretoze to zmaze volume, v ktorom su ulozene naindexovane data.

Comment by [Jakub Hlavačka](#) [ 16/Oct/21 ]

[Dominik Horvath](#) mozes indexovat data na masine.

Vytvoreny custom parser: <https://github.com/Dominik1799/gnewsParser>

Vsetky kniznice, ktore sme nasli, pracovali len ako wrapper nad RSS streamom. Vyuzivali funkcie, ktore su pre nas problem zbytocne, a boli preto velmi pomale.

Vlastny parser uskutocnil 1827 requestov a ziskal 35772 zaznamov za 93 sekund processing time a cca 20 minut realneho casu. Vyhľadavacia query ziskala vsetky clanky v casovom období od 10.10.2016 do 10.10.2021 na klucove slova "Jeffrey Epstein".

RSS vrati 100 clankov na danu query.

Total time: 0.046875

Malo by to byt v sekundach.

Ak sa vyberieme touto cestou, tak bude zjavne potrebne sa dostat k dalsim clankom a nie len prvym 100, ktore to vyhodi...

Podarilo sa mi vytvorit' prvotný script na zber dát, ktorý pracuje s knižnicou GoogleNews a newspaper3k. Avšak nie vždy sa nám podarilo získať samotný text článku, hlavne ak sa jednalo o iný jazyk ako angličtina. Ďalším problémom bola rýchlosť získavania samotných tiel článkov, ktorá celý proces podstatne spomalila.

**Comments**

Comment by [Táňa Poláková](#) [ 13/Mar/22 ]

User sa pamätá cez "useContext" a "setContex" v rámci modulu react.

<https://reactjs.org/docs/context.html>

Boli vytvorené dva nové súbory:

Utils/UserContext.js - tu sa definuje defaultný stav pre používateľské údaje, čiže prázdny objekt a taktiež metóda useUser, ktorá umožní jednotlivým komponentom prístup k používateľským údajom.

Components/UserProvider.jsx - slúži ako správca používateľa. Tento komponent bol pridaný do komponentu App a vďaka tomu môže každý child komponent prístupit' k používateľským údajom, keďže vracia useContext definovaný v predchádzajúcom súbore.

Logika prihlásenia:

```
import { useUser } from "../Utils/UserContext";  
  
...  
const {setAccessToken} = useUser();  
  
const onSubmit = (user_credentials) => {  
  token = apiCall(user_credentials);  
  setAccessToken(token);  
}
```

Keďže sa token zmení, automaticky sa vyplní aj kontext pre používateľa:

*Implementácia* v Components/UserProvider.jsx

Logika odhlásenia:

```
const onLogout = () => {  
  setAccessToken(null);  
};
```

Comment by [Táňa Poláková](#) [ 20/Mar/22 ]

Na základe spoločnej konzultácie bola logika prihlásenia a odhlásenia presunutá do UserProvider. Viac info na stránke dokumentácie.
